Burpee Building in Philadelphia—Our Eastern Headquarters

Dear Fellow Gardeners:

This year we must render a greater service to our country than ever before.

In America the food shortage is just beginning to be felt, but in other countries people are starving. We must send even larger quantities of food to our Allies and to our own men in the Armed Forces.

But the importance of gardening is not only because of a shortage of food. It is also because all the vegetables you grow in your own garden will relieve the pressure on the railroads and other transportation systems. If everyone who can, grows vegetables this year, it will help tremendously.

It is my purpose to do everything I can to be of service to you in supplying you with the best seeds that grow.

Last fall, Burpee's vegetables and flowers won the highest gold medal awards at every Victory Garden Harvest Show at which they were exhibited—in New York, Philadelphia, and Washington.

For sixty-seven years we have been doing our utmost to produce the highest quality seeds. During the past year we have renewed our effort not only to produce the best seeds that grow but also to produce enough seed.

This has not been easy to do for there is a labor shortage on the farms, and our Government is sending large lots of vegetable seeds to our Allied Nations, so that they can grow more of their own food.

Notwithstanding our great effort to increase the supply of seeds, there will be a shortage of some varieties. I suggest that you order early.

Although at the time of writing this message to you there is no ceiling on the price of seeds, we have not advanced the price of anything listed in this catalog. This means that, since America entered the war, there has been no increase in the price of Burpee's Seeds!

Everyone who can, should grow plenty of vegetables this year—for immediate and future use. And let me urge you also to grow flowers, for their uplifting influence—for they are the spirit of Victory.

BURPEE GUARANTEE

We guarantee the vitality and purity of Burpee's Seeds and Bulbs to the full amount of the purchase price. You can have your money back any time within a year if you are not satisfied with the results. Even with the highest quality seeds and bulbs, success in gardening depends largely upon cultivation, soil, and weather conditions. Therefore, in no case shall W. Atlee Burpee Co. be liable for more than the amount actually paid us for seeds or bulbs. All goods are sold under this Burpee Guarantee.

Please order your seeds as soon as possible. Send your order either to Philadelphia or to Clinton, Iowa, whichever is nearer to you—but please order early.

Wishing you a very successful garden,

Faithfully yours,

David Burpee

Burpee's Famous Seed Farms

If there is any farm more famous than all other farms in the world, it is Burpee's Fordhook, near Philadelphia in Pennsylvania. This experimental farm was founded by W. Atlee Burpee before the United States Government had any experiment stations. The next most famous and best known farm in the entire world is probably Floradale, near Santa Barbara, California. Just a few views of parts of these two farms are pictured on this page. Visitors are always welcome, especially in summer-time.

This is Allison Condit, one of our California vegetable experts, examining the vegetable trials on Floradale Farms. All kinds of vegetables and flowers are tested at both Fordhook and Floradale.

On Fordhook Farms at Doylestown, near Philadelphia, this section is devoted to Victory vegetable gardens for the school children under the guidance of one of the Burpee vegetable experts.

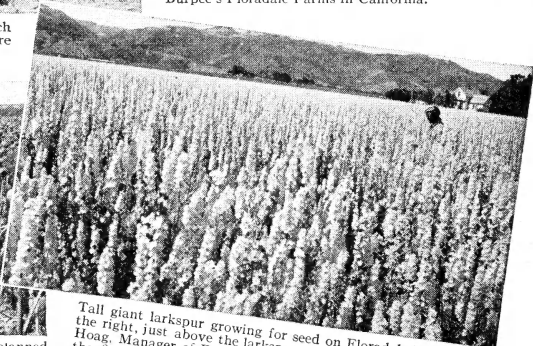

All kinds of flowers that grow from seed are tested each year for both germination and purity. The above picture shows only a small section of the Fordhook trials.

Our vegetable experts, Condit and Pride, are carefully examining and making notes of the table beet trials on Burpee's Floradale Farms in California.

Many years ago we were convinced that Germany planned another war for world conquest. To do our part we started in to train women to raise vegetable seeds on Floradale. These women are harvesting leek seed.

Tall giant larkspur growing for seed on Floradale Farms. To the right, just above the larkspur, you can see the head of Bill Hoag, Manager of Floradale Farms. Floradale still produces the finest flower seeds, although much of the acreage is now devoted to vegetables.

BURPEE'S ALL-AMERICA Prize Winners for 1943

1111 Jubilee Tomato

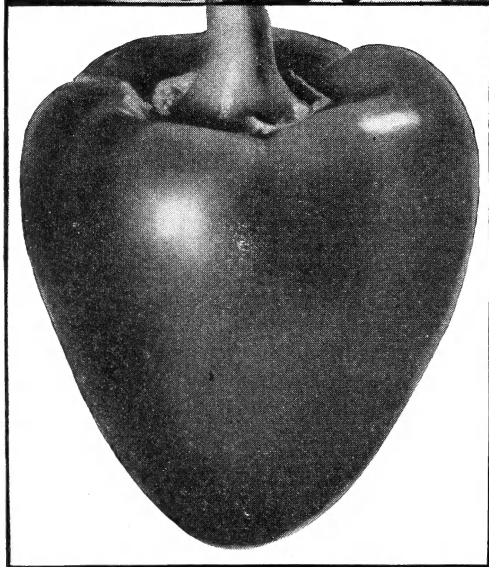

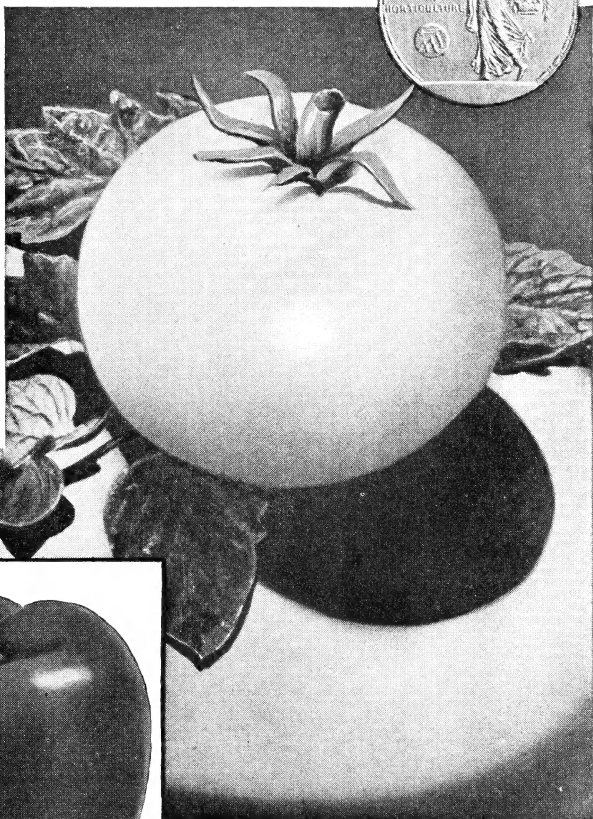

All-America Bronze Medal Winner

72 days. A new orange-yellow tomato which compares favorably with the best of the standard red varieties in shape, quality and solidity.

Jubilee is entirely different from any yellow or orange tomato you ever grew. Fruits are bright orange-yellow, globular, weigh about 6 ozs.; the orange colored interior is modern, thick-walled, with few seeds. The flavor is somewhat mild but not flat. Makes delicious juice of unusual and attractive color. Very high in Vitamins A and C.

The plants are short-stemmed, but not determinate, stiff, compact, and bear over a long season. The fruit color develops evenly and uniformly.

**Pkt. 15¢; 1/4 oz. 60¢;
1/2 oz. \$1.10; oz. \$2.00.**

847 Early Pimento Pepper

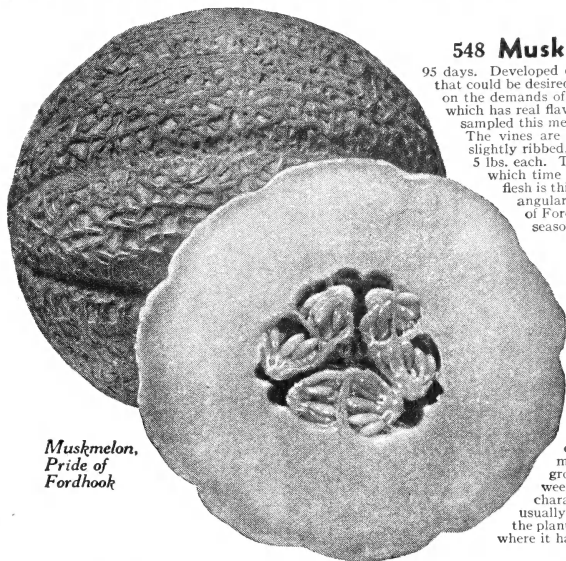

All-America Bronze Medal Winner

65 days. Peppers are heart-shaped, pendent, and when mature are 3 1/2 in. long and 2 1/2 in. in diameter at the top, smooth, dark green, turning bright red when ripe. The flesh is 1/4 to 5/16 in. thick—a heavy walled pepper which is mild at all stages and especially sweet after it has turned red.

Most desirable in the home garden for use both green and red, and for making canned pimentos. It may also be grown to extend the season of canning in the regions where pimentos are produced commercially. One of the earliest of all peppers.

Pkt. 15¢; 1/4 oz. 60¢.

New and Better Vegetables

*Muskmelon,
Pride of
Fordhook*

548 Muskmelon, Pride of Fordhook

95 days. Developed on Fordhook Farms and we believe it contains all that could be desired in a high quality melon, basing our selection work on the demands of consumers for a variety with a satin-smooth flesh which has real flavor as well as attractive appearance. Visitors who sampled this melon were unanimous in their praise of its merits.

The vines are vigorous and productive. The fruits, which are slightly ribbed, are oval to nearly round in shape and weigh 4 to 5 lbs. each. The rind is a blue-gray prior to full edible stage, at which time the color changes to a golden yellow. The orange flesh is thick, solid, ripens right down to the rind, and the triangular seed cavity is small and compact. We think Pride of Fordhook is unequaled where a melon with its length of season will mature. Pkt. 15¢; oz. 40¢; ¼ lb. \$1.25.

895 Radish, Cavalier

25 days. Our strain of this important variety has been rigidly reselected and represents an elite stock suitable for use by the most critical trade. Roots are highly colored, oblong globe shape, bright scarlet color, firm and crisp, and the short tops make it especially suitable for growing on muck land as well as upland soil.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢; ½ lb. \$1.50.

449 Kale, Norfolk

30 days. A smooth leaf type, also known as Han-over Salad. While young the leaves are sweet and much more tender than any other kale, and the growth is so rapid that cuttings can be made in three weeks from seeding. The stems are free of the red tinge characteristic of Dwarf Siberian. Although sowings are usually made in the spring, it may be planted in the fall as the plants are winter hardy. Especially suitable in the south, where it has achieved widespread popularity.

Pkt. 10¢; oz. 20¢; ¼ lb. 60¢; ½ lb. \$1.00.

291 Chicory, Castelfranco

95 days. Forms a loose head tinted red, rose and yellow with some leaves mottled in appearance; the thick, fleshy, crisp and tender leaves milder in flavor than the plain green leaved Chicory.

Pkt. 10¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$2.00.

292 Chicory, Trevigiana

95 days. This variety is preferred by Italian cooks for salad use because the slightly rose tinted leaves, which are large, fleshy and form a rosette like Batavian Endive, have a mild flavor and are tender and crisp.

Pkt. 10¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$2.00.

64 Bush Lima Bean, Cangreen

Honorable Mention, All-America Selections for 1943

72 days. Plant breeders have been working to obtain a lima bean of the Henderson Bush type with green seed. Several varieties are now offered, Cangreen being one of them; it cooks and cans green which is a distinct advantage for canning and freezing and preferred by many whose preference is for the baby butter-lima beans for eating fresh or as dry beans. Plants are dwarf, prolific bearing; pods flat with 3 or 4 green beans of good quality.

Pkt. 15¢; ½ lb. 40¢; lb. 75¢.

197 Cabbage, Reselected Drumhead Savoy

90 days. An exceptionally uniform strain of the popular original Perfection Drumhead Savoy. The stock we offer was bred for the particular needs of the commercial vegetable growers in Bucks County, Penna., and if grown to full size under proper conditions will produce heads weighing 7 to 10 lbs. and measuring 8 to 10 in. across. The leaves are heavily crumpled, rich dark green; popular because of its mild, pleasing flavor.

Pkt. 15¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$2.15.

Bush Lima Bean, Cangreen

Cabbage, Reselected Drumhead Savoy

New and Better Vegetables

86 Pole Bean, Potomac

Bronze Medal Winner, All-America Selections for 1943

70 days. Dark green pods, 6 in. long, slender, practically round, meaty, tender and stringless at all stages of its growth. Vines are good climbers, heavy producers of snap beans of excellent quality for home or market.

Pkt. 15¢; ½ lb. 35¢; lb. 65¢.

250 Cauliflower, Improved Super Snowball

82 days. In sections where the Snowball type of Cauliflower is preferred to all others, or matures to best advantage, growers should try this important strain which is produced under ideal climatic conditions at our Floradale Farms in California. Plants are uniform and set a crop of pure white, smooth heads which are notable for the tightness of their curds.

Pkt. 25¢; ¼ oz. \$1.50; ½ oz. \$2.75; oz. \$5.25.

318 Hybrid Sweet Corn, Carmelcross

80 days. This hybrid was developed at the Connecticut Experimental station, and is particularly well adapted to New England and the Northeastern states. The plants reach a height of 4½ to 5 ft. and produce ears containing 12 rows of delicious golden yellow kernels. It is considered by many to be superior to Marcross in every respect.

Pkt. 15¢; ½ lb. 35¢; lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.60.

728 Parsnip, Hollow Crown 10

100 days. Another favorite with the Philadelphia County, Pennsylvania commercial vegetable growers, and for that reason an ideal subject for the home vegetable garden. On appearance alone this selection is superior to regular strains of Hollow Crown, but its principal merit lies in its small core, which eliminates a certain amount of toughness when cooked.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

71 Bush Lima Bean, Thorogreen

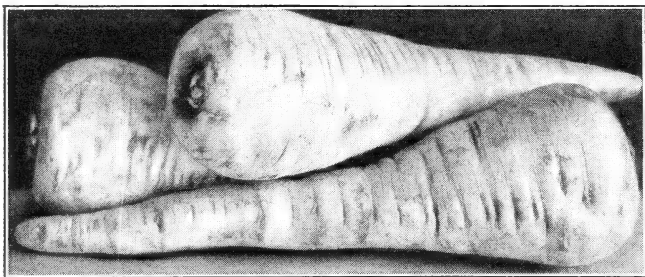

68 days. The earliest maturing of the green-seeded Henderson types. The plants are dwarf, dark green, erect, bushy, and set a prolific crop of flat pods containing 3 or 4 flattish, oval shaped beans. At maturity the seeds retain a pale green color, and in the edible stage the excellent quality is enhanced by the deeper green color. Highly recommended for canning, and eating in the green stage.

Pkt. 15¢; ½ lb. 40¢; lb. 75¢.

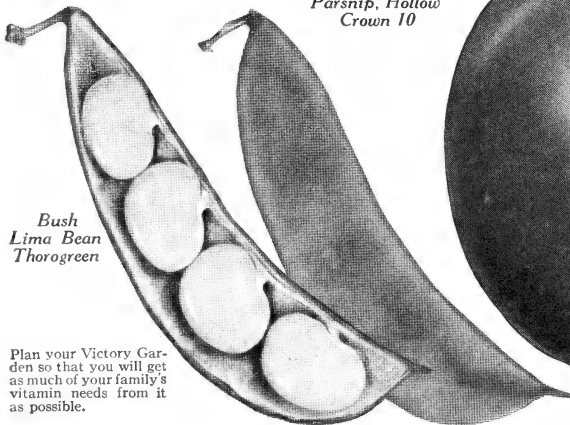

1119 Tomato, Pan America

75 days. The latest introduction by the United States Department of Agriculture and worthy of a trial in anybody's garden. The vines possess very high resistance to fusarium wilt, and the foliage is sufficiently dense to shade the fruit during development. Ripe fruits are globular to deep oblate in shape, bright scarlet, with a scarlet red interior, and weigh about 7 ozs. Suitable for all purposes.

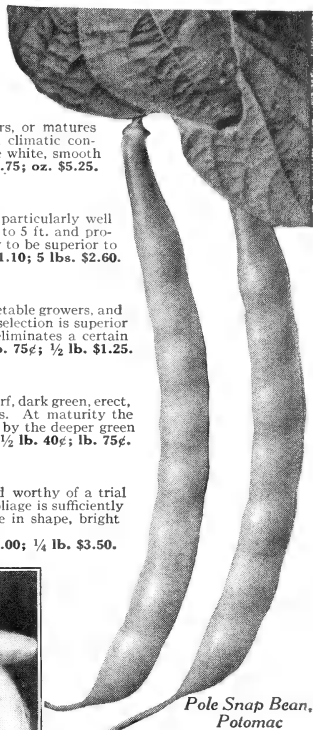

Pkt. 15¢; ½ oz. 60¢; oz. \$1.00; ¼ lb. \$3.50.

Burpee's CELTUCE

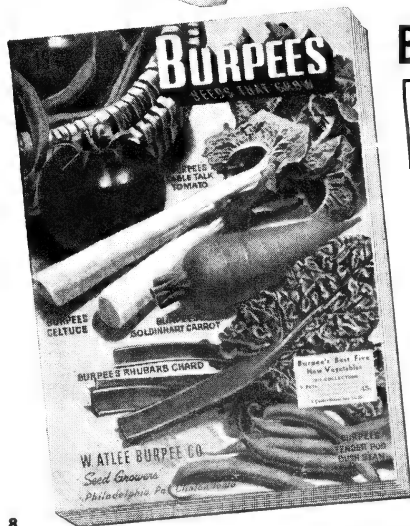

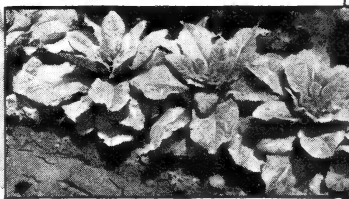

290 **Burpee's Celtuce** belongs to the lettuce family but is entirely different in its growth and uses. When plants are young, the leaves may be used as lettuce or as boiling "greens," but its chief value is its central stem or stalk.

Whether Celtuce stalks are to be eaten raw or cooked, you remove the lower leaves (see stalks at left) and then cut off all the outer skin and fibrous layers down to where they become light green and tender (see cross-section of stalk at far left). As a raw vegetable, cut the stalks into 4- or 5-inch lengths and split lengthwise; chill and eat as you would celery or carrots.

Cooked Celtuce stalks are pale green, attractive in appearance, and have a pleasing, mild flavor suggestive of celery, asparagus, and zucchini. There are many ways to use Celtuce: au gratin with cheese, braised, plain boiled served hot with butter sauce or Hollandaise sauce, cream of celtuce soup, etc.; it has numerous possibilities. Be sure to give it a trial.

Burpee's Celtuce grows easily and quickly, forming a rosette of light green leaves which may be used, when young, as "greens" (see center picture below).

In less than 90 days after seed is sown, the central stem or stalk of the plant is usable and will be found most tender at this age. (Mature plant at right.) Celtuce stalks are solid throughout, the skin greenish white and tough but the inside is very succulent, most delicate pale green, crisp and brittle. Young Celtuce leaves have 4 times the Vitamin C content of head-lettuce leaves. Pkt. 15¢; ¼ oz. 35¢; ½ oz. 65¢; oz. \$1.25.

1118 Burpee's Table Talk Tomato 75 days. Deep, globular, bright scarlet fruits, weighing 7 to 8½ ozs.; smooth skin, firm interior. A new all-purpose tomato for home or market. Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$3.25.

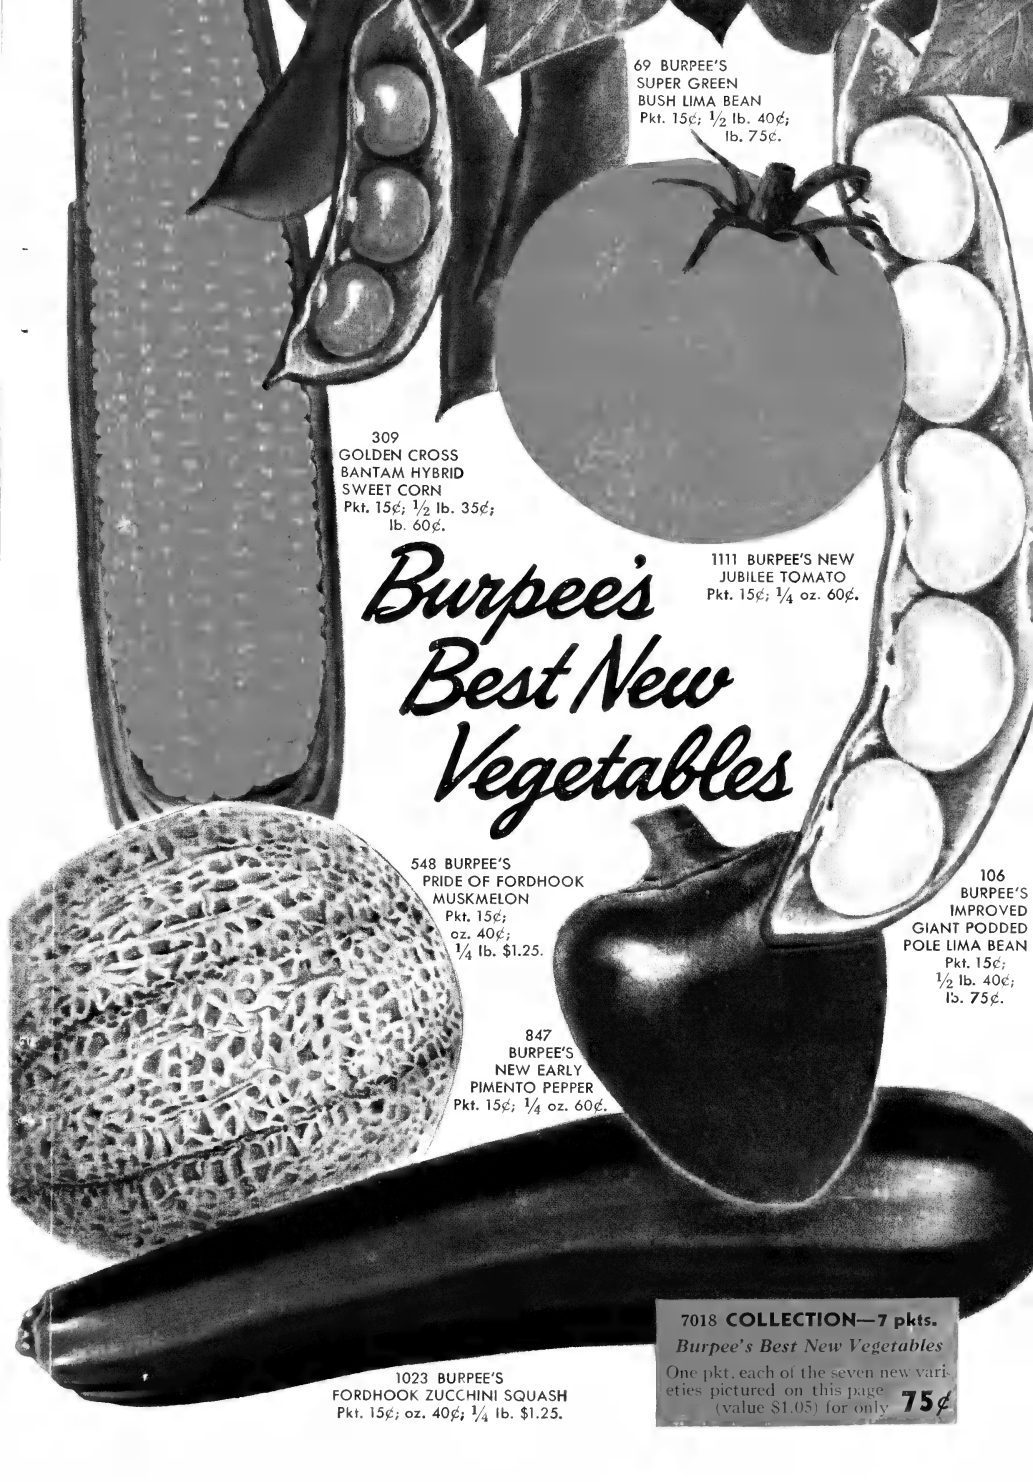

290 Burpee's Celtuce The outstanding double-purpose vegetable—the tops as "greens," the central stem or stalk is eaten raw or cooked. Pictured and described above.

224 Burpee's Goldinhardt Carrot 70 days. Delicious orange-scarlet roots, 5 to 5½ in. long, 2½ in. thick at the shoulder; tender and sweet orange flesh clear to the center. Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.70.

153 Burpee's Rhubarb Chard 60 days. A Swiss Chard that look like rhubarb. Leaves dark green, heavily crumpled, veined crimson. Another double-purpose vegetable—the leaves prepared like spinach and the mid-ribs like asparagus. The stalks fried in batter make appetizing fritters. Pkt. 15¢; oz. 60¢; ¼ lb. \$2.25; ½ lb. \$4.25.

47 Burpee's Tender Pod Bush Bean 48 days. Dark green, smooth, round pods, 4½ to 5 in. long, curving slightly with distinctively curved tips; perfectly stringless. Fresh, brittle and of the most delicious flavor. The seed crop of this outstanding early, high quality bean is very short so that we can offer only packets this year. Pkt. 15¢; 7 pkts. \$1.

ASPARAGUS—Seed and Roots

Asparagus roots are ready for spring delivery during March, April and early May and in October for fall planting.

Seed should be sown as early in the spring as ground can be worked. When the roots are 1 or 2 years old, transplant them in the spring or fall to their permanent location, spacing them 1½ to 2 ft. apart in rows 2½ ft. apart. One pkt. of seed will produce about 100 roots; one ounce about 750 roots; 12 lbs. will sow an acre. Burpee's leaflet No. 9, "How to Make an Asparagus Bed," will be sent free on request.

9 Mary Washington—Our most valuable green asparagus

The shoots are thick and heavy, long and straight, rich dark green lightly tinted purple, with very compact tips that are slow to branch or "blow." Heavy yielder and fine flavor. Highly resistant to asparagus rust. Mary Washington is undoubtedly the best green asparagus for home or market.

Seed Seed sown this spring will give a light cutting of stalks in three years and, of course, regular cuttings may be made each year thereafter. **Pkt. 10¢; oz. 20¢; ¼ lb. 50¢; ½ lb. 90¢; lb. \$1.75.**

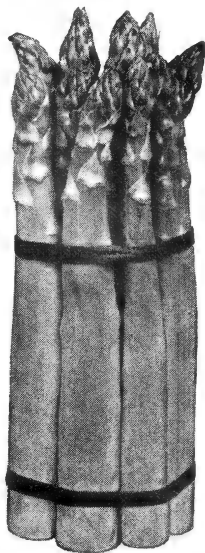

9950 Roots (1-Year-Old) Strong, healthy roots which, if planted this spring, saves a year over raising your own plants from seed. Some cutting may be done next spring but your asparagus bed will be benefited if cutting is delayed until the second year. Plant roots as early in the spring as the ground can be worked. Our roots are carefully graded and packed. **25 for 85¢; 50 for \$1.50; 100 for \$2.75, prepaid. Not prepaid, 250 or more @ \$15.00 per 1000; 2000 or more @ \$14.00 per 1000.**

9951 Roots (2-Year-Old) For the quickest returns, plant these large roots. They will give a light cutting during the coming season and can be cut in the regular way each year thereafter. Plant roots as soon as possible after they have been received. **25 for \$1.00; 50 for \$1.65; 100 for \$3.00, prepaid. Not prepaid, 250 or more @ \$16.00 per 1000; 2000 or more @ \$15.00 per 1000.**

Follow the Bull's Eye

We have used this mark  for years to guide the gardener in the selection of varieties which we believe will give the best results under varied conditions of soil and climate. This mark , usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the **best of their class**. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most reliable under all conditions.

Mary Washington Asparagus

BROCCOLI

Same cultural directions as for cabbage will also apply for broccoli. One pkt. produces about 250 plants; oz. 3000; use ¼ lb. for an acre.

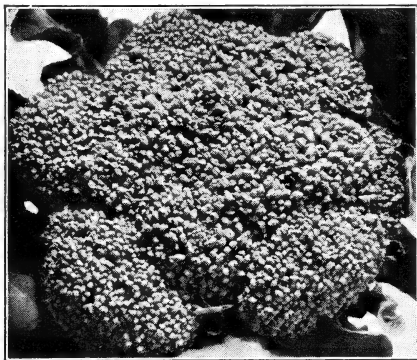

Italian or Sprouting

Resembles cauliflower except in color. One large head is produced on the main stalk, and, after being cut, numerous smaller heads appear.

157 Calabrese 85 days. The standard variety of sprouting broccoli. Calabrese is grown for home garden, for market, and recently in large quantities for freezing. Plants are tall, erect and vigorous, reaching 2½ or 3 ft. in height under good conditions, with the central large, green, cauliflower-like head 5 or 6 in. in diameter. **Pkt. 15¢; ½ oz. 40¢; oz. 75¢; ¼ lb. \$2.25.**

One of the first vegetables to mature in the spring if seed is sown in late summer or early fall of the previous year. Tops and flower shoots are superior in flavor to turnip "greens." **Pkt. 10¢; oz. 20¢; ¼ lb. 60¢.**

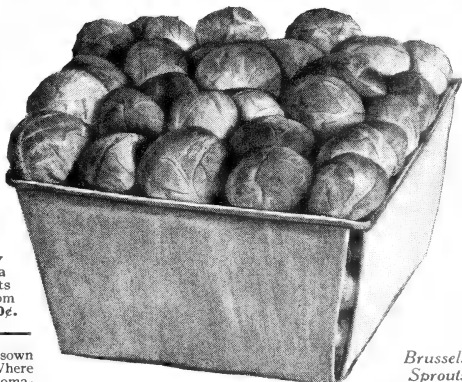

Calabrese Sprouting Broccoli

BRUSSELS SPROUTS

More delicate in flavor than cabbage. Sow the seed thinly in a specially prepared seed-bed or coldframe in early June and transplant to the garden when plants have reached a convenient size for handling. This is usually in about 30 to 35 days after the seed is sown. Space plants 18 in. apart in rows 3 to 4 ft. apart. When the sprouts begin to form, remove the lower leaves to allow for the better development of the sprouts. Quality is greatly improved by frost. One pkt. will sow 75 ft. of row; an oz. 500 ft.; use 4 to 6 ozs. for an acre.

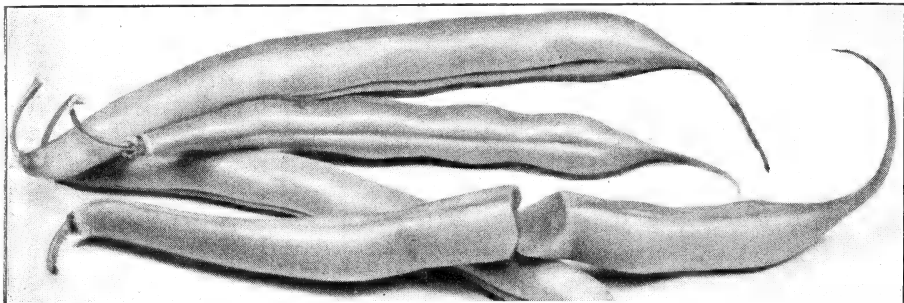

158 Long Island Improved 120 days. Grown extensively on Long Island for the New York market, where it always brings a good price. Compact plants, 20 in. tall, with solid, heavy sprouts measuring 1½ to 1¾ in. in diameter which mature successively from bottom to top of the stem. **Seed crop is short. Pkt. 10¢; oz. 50¢.**

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the field. Of course, the time is average and some variation is to be expected, depending on the season, locality and time of sowing.

How to Grow Bush Beans

Beans are one of the most satisfactory and productive vegetables, because they grow so vigorously and bear with such wonderful abundance. Plants grow from 15 to 20 in. tall. Do not sow seed until the soil is quite warm; in the vicinity of Philadelphia, early May is about the right time for the first sowing. A warm, well-drained, sandy loam is best suited. The pods are most delicious if picked before they have reached full size, and the plants will continue bearing much longer. To provide for a continuous supply of tender beans, seed should be sown every 2 weeks until early August. Plant in rows not less than 18 in. apart; space seed 2 to 3 in. apart in the row, cover with 2 in. of soil, and firm the surface to assist germination. One pkt. of seed will sow about 25 ft. of row; one lb. 150 ft. Treat seed with Legume Aid before planting to increase the yield.

10 **BURPEE'S STRINGLESS GREEN-POD BUSH BEAN** ◉

Most Delicious Flavor of all Green-Podded Beans

Grown mostly as dried beans for winter use; the pods of Dwarf and French Horticultural may be used, when young, as snap beans. The vines are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. One pkt. will sow about 25 ft. of row; one lb. 150 ft. of row.

44 Burpee's Kidney Wax ☉

52 days. This Burpee introduction is pronounced by many the most tasty of all beans. Pods are almost straight, broad, yet quite thick, meaty, and entirely stringless at all stages of growth; 6 in. long, $\frac{1}{2}$ in. broad, $\frac{3}{4}$ in. thick, and of a bright lemon-yellow, reflecting their tenderness and delicate flavor. Prized for canning.

The popularity of this bean is due to several important factors—pods are remarkable for their meatiness, fine flavor, brittleness, attractive clean color, and their absolute freedom from strings; plants are noted for their great prolificness. They are strong growers, forming upright bushes, 18 to 20 in. in height. Seeds are white with brownish black eye.

POLE BEANS

Pole Beans are extremely productive. They come into bearing later than the bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy, however, so should be planted a week later. They mature in from 64 to 80 days, depending on variety, and do best if the vines are given support, the most frequently used being rough poles, 7 ft. or more tall, sunk in the ground $1\frac{1}{2}$ to 2 ft. deep, and 3 to 4 ft. apart. Sow seed when the soil has become warm but not later than June 15. Place 5 to 8 beans around each pole, cover with 2 in. of soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles; 1 lb. of seed for 100 poles. Pole Beans may also be planted along a trellis or fence, sowing 300 ft. of row with 1 lb. of seed.

72 Kentucky Wonder (old Homestead) ☉

These strings do not impair the quality of the pods so that they can be eaten until late in the season. Though thick, the pods appear slender on account of their great length. The light brown seeds have a tasty flavor which makes them desirable for use as shell beans. **Pkt. 10¢; $\frac{1}{2}$ lb. 20¢; lb. 35¢; 2 lbs. 65¢; 5 lbs. \$1.50.**

Funk Delicious Soy Beans

EDIBLE SOY BEANS

Since the recent introduction of vegetable type soy beans into this country, the demand for seed has constantly increased. These beans are not only delicious when eaten green or dry, but they are also an excellent source of Vitamins A, B, and G. Ask for cooking instructions when ordering seed. Soy beans rate higher than Navy Beans in proteins and they will greatly out-yield them in the same amount of space.

35 Bansei—Earliest Soy Bean

96 days. One of the earliest and most productive of all and very adaptable in its growing requirements; it will produce crops in nearly any section of the country. Plants grow 24 in. high and do not require support. They are literally loaded with pods. FAVA BEANS

24 Long Pod—Shell Bean Mammoth Pods with 5 to 7 Lima-like Beans

Plants are large and erect, true bush form, and heavy yielders. Pods are glossy green, 7 in. long, and quite broad; they contain 5 to 7 large, broad, flat, light green beans, which are valuable for use as green shell beans. The pods are not edible; the large beans somewhat resemble Lima Beans and should be used in the same way. Flavor is somewhat like that of the pea. Dry seed is large, circular, flat, reddish brown with black eye. Try a planting this year and remember you must plant early. One pkt. will plant 15 ft. of row; 1 lb. for 100 ft. of row. **Pkt. 10¢; $\frac{1}{2}$ lb. 35¢.**

W. ATLEE BURPEE CO. 13

65 **BURPEE'S FORDHOOK BUSH LIMA BEAN**

Introduced by Burpee and named for Burpee's Fordhook Farms

75 days. Burpee's Fordhook is known and grown wherever beans are planted. It is the leading variety of bush lima beans, and in the important commercial bean growing sections it is usually the only variety grown; this surely shows its desirability.

The plant is bushy, upright, with large leaves of heavy texture, 20 in. or more in height, with a spread of 2 ft. or more, very vigorous, with many pod-bearing lateral branches. Pods are borne close to the plant and often on the ends of the branches. They are 4 to 5 in. long, 1 to 1½ in. wide, and ¾ in. thick, dark green, straight to slightly curved, crowded with 3 or 4 large, thick beans of a delicious flavor, not unlike chestnuts. Seeds are green, holding this color until quite old, becoming cream colored when ripe.

The dry, mealy quality of Fordhook is familiar to every one who uses lima beans. The beans are large, and there is, therefore, less waste in shelling than with other varieties. Its bearing season is long and a planting may be picked for a month or more.

For home garden or commercial use we recommend this great bean highly. Fine quality, always salable, attractive appearance, and large pods allow us to say that in lima beans, Fordhook is the best. (For a pole lima bean with all the good characteristics of Fordhook, plant Burpee's Best, offered on page 15.)

We grow our Fordhooks ourselves in California, selecting them continuously and checking over stocks by trials at Fordhook Farms. As the originator of this fine bean, we invite your order for the finest seed obtainable.

Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

63 **Burpee's Improved Bush Lima**

75 days. The best of the flat-seeded bush limas, and a decided improvement over Burpee's Bush. The pods are larger, the individual beans, either green or dry, are nearly twice as thick, and the plants are more productive, large and vigorous, meeting in a three-foot row under average conditions. They are of true bush habit, but when well grown will send out lateral, pod-bearing branches which rarely exceed 18 in. in length and do not require support. Pods are 4½ to 5½ in. long and 1 to 1½ in. broad, slightly curved and moderately thick, containing 4 or 5 very large beans of attractive appearance and fine quality. Burpee's Improved is popular where a lima with a somewhat flatter seed than Fordhook is demanded. It is easy to shell. Distinct enough from Fordhook in shape and flavor, it supplements rather than competes with that excellent variety. Try both kinds in your garden this season.

Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

66 **Burpee's Philadelphia Bush Lima**

68 days. Pods grow 4 in. long, 1 in. wide, straight to slightly curved, flat, each contains 3 or 4 flat, medium-sized beans which are green when immature, turning white. Plants are vigorous, very productive, bearing the bulk of their pods in the center of the plant; sets well under conditions where some large-seeded limas fail. Being early, it is especially valuable in the North. In favor where beans are wanted that are intermediate in size between the large- and small-seeded varieties. Suitable for the home garden, market, canning and freezing. Surpasses the small butter beans in quality and productiveness.

60 **Burpee's Bush Lima**

78 days. The original dwarf, large-seeded bush lima. First introduced exclusively by Burpee in 1890. It is an immense yielder. The pods and beans, however, are not so large, nor are the bushes so prolific, as those of the Burpee Improved Bush Lima. The bushes, 18 to 24 in. tall, are of stout, erect growth, yet branching so vigorously that each develops into a neatly rounded plant about 2 ft. in diameter. Pods grow 4½ to 5 in. long, 1 to 1½ in. wide, and contain 3 or 4 large beans of the highest quality and as large as those of pole limas.

Pkt. 10¢; ½ lb. 25¢; lb. 40¢;
2 lbs. 75¢; 5 lbs. \$1.75.

68 **Wood's Prolific Bush Lima**

68 days. **Improved Henderson Bush or Baby Lima.** Being early maturing, it is especially desirable in northern states where growing seasons are short. Pods are small, 3 to 3½ in. long, ¾ to 1 in. wide, each containing 3 or 4 flat beans of delicious, sweet, buttery lima flavor. Plants are truly prolific, and while they begin to bear very early, they will continue to produce until killed by frost. Use either fresh or dried for winter use. Desirable for small early butter beans in the home garden. Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75.

14 **W. ATLEE BURPEE CO.**

69 **Burpee's Super Green Bush Lima**

74 days. A baby bush lima with beans that retain their green color until they are fully matured. Pods are dark green, thick walled, 3 in. long, and contain three, sometimes four, green beans. The yield of beans from a given number of pods exceeds that of other baby lima bean varieties. Plants grow about 18 in. tall and the same distance across, with many bearing branches so that it is a good producer. It should be valuable for freezing and canning.

Pkt. 15¢; ½ lb. 40¢; lb. 75¢; 2 lbs. \$1.35; 5 lbs. \$3.25.

61 **Baby Fordhook Bush Lima**

70 days. A thick-seeded, small lima bean of far better quality than the flat type. It was designed especially for canning and freezing; home gardeners, too, will appreciate its surprisingly heavy crop of pods under almost any conditions. Plant is truly bush, about 14 in. tall, with shiny, dark green leaves, heavily productive, bearing pods quite close to the stem. Pods are 2½ in. long and ¾ in. wide, thick, slightly curved, containing 3 or 4 beans, close but not crowded in the pod. Seed is thick, green, turning cream when dry.

Pkt. 15¢; ½ lb. 35¢; lb. 60¢;
2 lbs. \$1.10; 5 lbs. \$2.60.

How to Grow Bush Limas

Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 5 in. apart in rows 2½ to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started, thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. Pick the pods as soon as the beans have reached edible size. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb. 100 ft.; the small-seeded kinds will, of course, go much farther.

106 **BURPEE'S IMPROVED GIANT PODDED POLE LIMA BEAN**

90 days. The largest podded of all pole limas. The pods are truly enormous, 7 to 8 in. long, $1\frac{1}{2}$ to 2 in. wide, with five and sometimes six extra large, flat, green beans of the most delicious flavor. Vines are vigorous growing; attain a height of 10 to 12 ft. and freely produce their pods in clusters of 4 to 8 from the bottom to the top of the poles. Pickings may be made continuously from midsummer until vines are killed by frost. A marked improvement over Giant Podded. **Pkt. 15¢; $\frac{1}{2}$ lb. 40¢; lb. 75¢; 2 lbs. \$1.35; 5 lbs. \$3.25.**

95 Burpee's Sunnybrook —*Very large pods, slimmer than above*

90 days. The popularity of this fine bean is due to the large sized pods and its tremendous yield, each spike carrying from 5 to 10 pods which are closely packed with 4 and often 5 large, thick, meaty, light green beans of the finest quality. Pods grow 7 in. long and $1\frac{1}{4}$ in. wide; the beans retain their green color for a long time. **Earyl.** **Pkt. 10¢; $\frac{1}{2}$ lb. 30¢; lb. 55¢; 2 lbs. \$1.00; 5 lbs. \$2.35.**

102 Florida Speckled Butter—*Early, hardy, vigorous*

78 days. Considered one of the most prolific of limas. Vigorous plants; pods medium dark green, 3 to $3\frac{1}{4}$ in. long, especially suitable for the South. Each pod contains 3 and occasionally 4 beans, which are small, flat, white marked purple, but if picked when young, the markings on the seed will not yet have been developed. **Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75.**

99 King of the Garden—*A good old reliable standby*

88 days. A strong grower and uniformly large podded. The pods contain 5 and often 6 large beans which are easily shelled, of handsome appearance and excellent quality. One of the leading pole lima beans for home and market gardeners. **Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75.**

103 Carolina or Sieva—*The "Butter Bean" of the South*

78 days. The vines quickly produce a fine crop of small, attractive pods, $3\frac{1}{2}$ in. long, each with 3 or 4 small, flat, green beans of splendid quality. Especially valuable in cooler sections of the country and in localities with hot, dry summers. **Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75.**

96 Early Leviathan—*Earliest large-seeded pole lima*

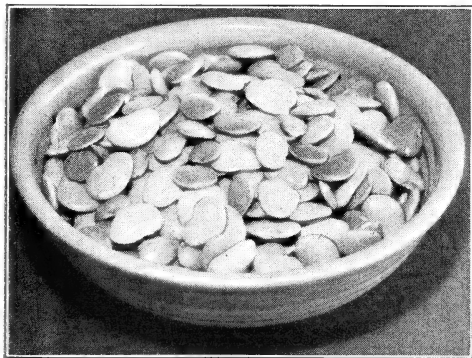

79 days. An early, hardy, and most prolific pole lima bean producing a handsome crop of pods 5 to 6 in. long, containing 3 or 4 and sometimes 5 large beans of very good quality and which remain green for a long time after being shelled. **Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.**

105 Burpee's Best Pole Lima —*Improved "Challenger"*

92 days. The Fordhook among the pole limas. Burpee's Best has been making friends rapidly since its introduction in 1934, and we believe that it has only begun its march toward popularity. You know Fordhook Bush? Then just imagine a pole bean with all the good characteristics of Fordhook—

its thick seed, straight, smooth pod, its rich tenderness, but with larger pods, and three or four times as many on each of the vigorous plants.

Burpee's Best will climb 10 to 12 ft. under average conditions, and produce pods in clusters of 4 to 8 along its entire length. The pods are straight, 5 to 6 in. long, $1\frac{1}{2}$ in. broad, and nearly one inch through, well filled with 4 or 5 and sometimes 6 big, thick, plump beans of delicious flavor. Burpee's Best represents a marked improvement over Challenger Pole, and we suggest growing it in its place. **Pkt. 15¢; $\frac{1}{2}$ lb. 35¢; lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.50.**

Burpee's Best Pole Lima Beans

How to Grow Pole Limas

Pole Lima Beans are easily grown in any rich, well-drained garden soil. While they mature later than bush lima beans, they greatly outyield them per square foot of garden space. Vines should be given support, the most frequently used being rough poles, 7 ft. or more tall, sunk $1\frac{1}{2}$ to 2 ft. deep in the ground and spaced 3 to 4 ft. apart. Sow seeds when soil has become warm; put 6 to 8 seeds (eyes down) around each pole, cover with 2 in. of fine soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. One pkt. will plant 10 poles; 1 lb. for 50 poles; 35 lbs. for one acre. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. to 50 ft. of row. Many consider the flavor of pole limas better than the bush limas.

121 Burpee's Red Ball

60 days. Red Ball is remarkable for its uniform shape, deep colored flesh, and fine sweet flavor. The roots are deep, globe-shaped, growing to 3 in. in diameter, and having a smooth, deep red skin. The flesh is also extremely dark red, free from woody fiber, and very tasty. The quality is always the finest.

Thousands of home and market gardeners grow it annually to their profit and entire satisfaction. Its intense dark red color especially fits it for canning. Medium tall tops.

Pkt. 10¢; oz. 30¢; ¼ lb. 95¢; ½ lb. \$1.75.

125 Early Wonder — Quick grower

55 days. It is semi-globe shaped, about 3 in. across, with medium-sized tops and a thin tap-root. Dark red skin and deep red flesh with slightly lighter zones. Gardeners like this very early beet; its smooth skin and uniform shape commend it to everyone; its evenness of maturity recommends it as a market variety. May be used for fall planting.

Pkt. 10¢; oz. 25¢; ¼ lb. 85¢; ½ lb. \$1.50.

Spinach Beet or Chard is grown for use as "greens," the leaves used to replace spinach during hot weather; the mid-ribs may be prepared like asparagus. Be sure to try Burpee's Rhubarb Chard. See page 49 for all varieties.

128 Burpee's Improved Blood Turnip Beet

59 days. The large beets, 3 to 4 in. across, are round but sometimes deeper than their diameter. The flesh is dark red, occasionally zoned. Though it is a quick grower, the roots will keep a long time in storage. A splendid variety for the home garden and for market gardeners; it is dependable in every way. Flesh is fine grained, tender and most agreeably sweet.

It may be grown for early use, summer, fall or winter storing as well as for canning. Because of its quickness of growth, it is especially suited for late sowings. It is really an all-season table beet of high quality that we can recommend to every one.

Pkt. 10¢; oz. 25¢; ¼ lb. 85¢; ½ lb. \$1.50.

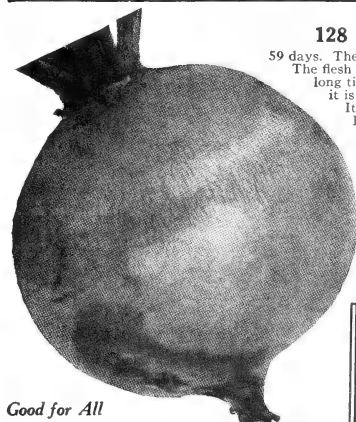

114 Good for All — A true all-purpose beet

58 days. Fine for home garden, market, canning and pickling whole or sliced. Reaches 3 in. when fully grown, but is best for canning when about 1½ in. in diameter. Roots smooth, globe-shaped, and very even in color, shape and size. Dark red skin; interior dark blood-red, fine grained, sweet and tender. Tops are short and rather slender.

Pkt. 10¢; oz. 25¢; ¼ lb. 95¢; ½ lb. \$1.75.

How to Grow Beets

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make sowings 3 to 4 weeks apart up to the end of July. Sow seed in rows 1½ to 2 ft. apart and cover with 1 in. of fine soil. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best beets for winter storing. Dig the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use. Beet tops are used quite extensively for "greens." One pkt. of seed will sow 25 ft. of row; for 100 ft. A rich, sandy loam, mellow and deep, produces the best roots.

Burpee's Extra
Early

Detroit
Dark Red

115a Detroit Dark Red, Short Top ☉

60 days. An improved and refined strain of Detroit Dark Red. It has tops which average about 3 in. shorter than those of the regular strain, making it suitable for growing on muck or for any use where large tops are not necessary or desirable. Roots are also slightly smaller and more globular. Skin is dark red; flesh is uniform deep red with the zones so inconspicuous that the flesh seems to be one solid ball of deep blood-red. The smaller tops are more acceptable to canners and allow the beets to stand closer together in the home garden. Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75.

115 Detroit Dark Red, Medium Top

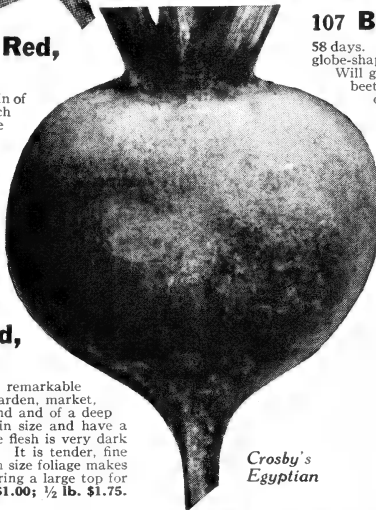

59 days. An early maturing beet of remarkable uniformity. Splendid for the home garden, market, shipping and canning. Perfectly round and of a deep red color. They reach 2½ to 3 in. in size and have a small collar and a thin tap-root. The flesh is very dark blood-red, showing hardly any zones. It is tender, fine-grained, exceptionally sweet. Medium size foliage makes it popular with market growers requiring a large top for bunching. Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75.

116 Ohio Canner

62 days. In shape, the roots vary a little from almost round to slightly flattened; the skin is smooth and very dark red. The color of the flesh is extremely dark and shows hardly any zones. A desirable home garden beet and one that is especially suitable for canning. Where deep red interior color is an important consideration, Ohio Canner is valuable for market growing. Pkt. 10¢; oz. 20¢; ¼ lb. 70¢; ½ lb. \$1.30.

109 Extra Early Flat Egyptian

53 days. Roots are distinctly flattened and have a small top; flesh is dark purplish red zoned with a trifle lighter color; skin is medium red. Tender and sweet. The earliest of all. Pkt. 10¢; oz. 25¢; ¼ lb. 85¢; ½ lb. \$1.50.

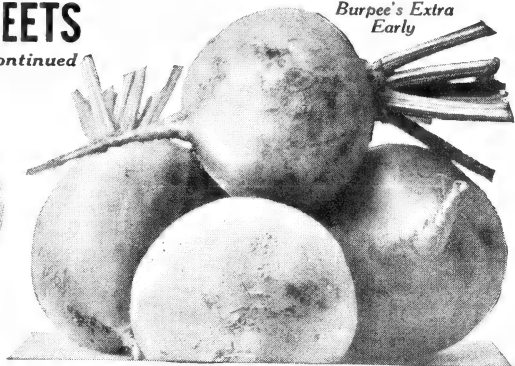

Crosby's
Egyptian

111 Crosby's Egyptian ☉

56 days. Widely grown for an early crop of beets for the table or market. Roots are top to semi-globe shaped and about 3 in. in diameter. The skin is medium dark red and the flesh is a shade or two lighter, with still lighter zones. The tops are medium size, which, together with small, slender tap-roots, makes this beet valuable to market growers for bunching. Pkt. 10¢; oz. 20¢; ¼ lb. 70¢; ½ lb. \$1.30.

120 Winter Keeper

80 days. A "long season" beet which remains solid and tender all summer and also when stored for winter. As the half-long shaped roots grow slowly, it is valuable as a late beet, and you will find the Winter Keeper firm and sweet when most others are past their prime. Skin is dark red as is the flesh. Pkt. 10¢; oz. 30¢; ¼ lb. 95¢; ½ lb. \$1.75.

107 Burpee's Extra Early ☉

58 days. Excellent early beet with perfectly smooth globe-shaped roots that are most regular in shape. Will grow to 3 in. in diameter, but, as with all beets, can be used when small. The flesh is dark red and shows hardly any zones. A profitable early, dark red skinned beet with many market growers and a popular one for the home garden. Flavor is sweet and tasty. Pkt. 10¢; oz. 25¢; ¼ lb. 85¢; ½ lb. \$1.50.

Mammoth Prize Long Red Mangel
18 to 24 in. long; 5 to 6 in. across.

MANGELS and SUGAR BEETS

Used largely for winter feeding of your stock. A packet will sow 25 ft. of row; an oz. 100 ft.

151 Mammoth Prize Long Red 110 days. Largest and heaviest cropping Mangel. Red skin; white flesh veined pink. Always satisfactory. Grow ½ to ¾ above surface. Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

147 Golden Tankard 100 days. Smooth yellow-skin Mangel with orange-yellow flesh. Large oval-shaped roots with broad shoulder. Pkt. 10¢; oz. 20¢; ¼ lb. 60¢; ½ lb. \$1.00.

145 Giant Half Sugar Rose 90 days. Broad, wedge-shaped Mangel. Skin is bright rose above and white below; flesh is white. Highly nutritious and rich in sugar. Pkt. 10¢; oz. 20¢; ¼ lb. 60¢; ½ lb. \$1.00.

143 Klein Wanzleben 90 days. A heavy yielding Sugar Beet. Large, smooth, white, wedge-shaped roots rich in sugar content. Roots grow entirely below the surface and are smaller than Mangels. Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

BURPEE'S CABBAGE

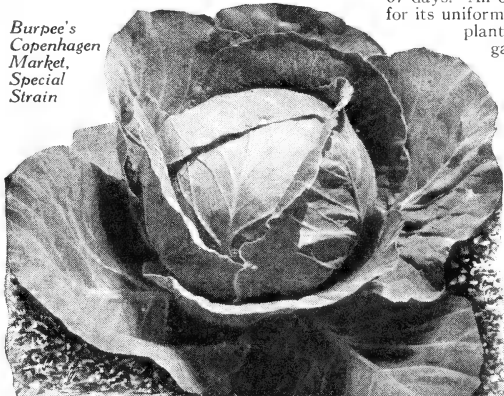

Start early cabbage in hotbed or house the middle of February. Late cabbage for winter use is sown in a seed-bed outdoors in late May or early June. A pkt. will produce about 250 plants, an oz. about 2000 plants. $\frac{1}{4}$ lb. sown in the hotbed gives sufficient

plants to set out one acre. Sown in the open seed-bed, $\frac{1}{4}$ lb. is needed for planting one acre. Days to maturity are figured from the time the plants are set in the garden; allow 30 days to produce plants from seed. Treat seed with Semesan to prevent damping-off.

Earliest Varieties

192 BURPEE'S COPENHAGEN MARKET (SPECIAL STRAIN) ◎

*Burpee's
Copenhagen
Market,
Special
Strain*

67 days. An outstanding strain of the variety which is notable for its uniformity from year to year as well as in a single year's planting. This uniformity makes it valuable to home gardeners and to market growers who supply a critical trade. Extreme earliness is another quality of this cabbage which has found favor with our customers all over the world. Produces well-rounded, solid heads of excellent quality, $6\frac{1}{2}$ in. in diameter and 6 in. deep, weighing from 4 to $4\frac{1}{2}$ lbs. Plants are small and quite compact, which permits close planting. Heavy yielder.

Pkt. 15¢; $\frac{1}{2}$ oz. 35¢; oz. 60¢; $\frac{1}{4}$ lb. \$2.15.

178 Copenhagen Market (Standard Strain)

72 days. A splendid cabbage, slightly larger and later than Burpee's Special Strain offered above. Uniform in shape and size. Pkt. 10¢; $\frac{1}{2}$ oz. 30¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.85.

Yellows-Resistant Cabbage

Yellows-resistant strains were introduced by the Wisconsin Agricultural Experimental Station so that cabbages could be grown in localities where infested "cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you live in such a locality and have had trouble, try the following highly yellows-resistant varieties:

- 191 Early Jersey Wakefield See this page.
- 172 Improved Allhead Select See this page.
- 170 Marion Market See this page.
- 181 Golden Acre See page 19.
- 190 Wisconsin All Seasons See page 19.
- 174 Wisconsin Hollander See page 20.

169 Charleston or Large Wakefield

71 days. Larger than Early Jersey Wakefield, not so pointed and ready about six days later. The broad, heart-shaped heads are $8\frac{1}{2}$ in. high and $6\frac{1}{2}$ in. across at the base; weigh $3\frac{1}{2}$ to $4\frac{1}{2}$ lbs. each. Very desirable for the home or truck garden, as it is a sure cropper and a heavy yielder; adapted particularly to wintering over in the South. Ours is a select strain.

Pkt. 10¢; $\frac{1}{2}$ oz. 20¢; oz. 30¢; $\frac{1}{4}$ lb. 95¢.

167 Early Jersey Wakefield ◎

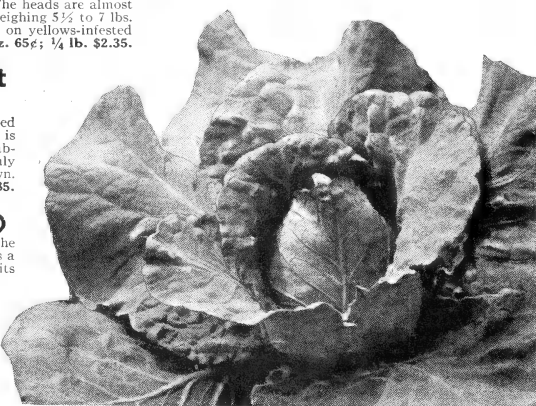

65 days. Uniform heads of conical form, pointed at the top and having a broad base. The entire plant makes a compact growth, with few outer leaves, which permits close planting. Heads weigh 2 to 3 lbs. each, are tightly folded, crisp and tender. Suitable for home garden and markets which prefer early pointed heads.

Pkt. 10¢; $\frac{1}{2}$ oz. 20¢; oz. 30¢; $\frac{1}{4}$ lb. 95¢.

191 Early Jersey Wakefield (Yellows-Resistant)

63 days. The heads are of conical form, with a broad base and pointed top. Compact plants are very productive. About the first of this group of resistant cabbages to mature. Fine for cole slaw, salads and for boiling. Recommended in place of Early Jersey Wakefield only on soils infested with the cabbage yellows.

Pkt. 10¢; $\frac{1}{2}$ oz. 30¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.85.

Early Jersey Wakefield

168 Extra Early Jersey Wakefield

61 days. Heads are erect, conical, and perfectly uniform; they weigh from 2 to $2\frac{1}{2}$ lbs. each. They measure about 7 in. high and $4\frac{1}{2}$ in. at the base. A few days earlier than Early Jersey Wakefield and slightly smaller sized heads.

Pkt. 10¢; $\frac{1}{2}$ oz. 20¢; oz. 30¢; $\frac{1}{4}$ lb. 95¢.

175 Golden Acre Cabbage ©

63 days. Has all the wonderful characteristics of our special strain of Copenhagen Market, but the heads are a trifle smaller and mature 4 days earlier. They are very uniform, solid, round, 6 in. in diameter, and weigh 3½ to 4 lbs. each—a most satisfactory size for the average family; in quality, they cannot be surpassed. Plants are small and compact, which permits close planting. Valuable for home or market.

Pkt. 15¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$2.15.

181 Golden Acre (Yellows-Resistant)

64 days. The earliest of the round-headed yellows-resistant cabbages. Heads are medium sized, 5½ in. deep, 6 in. in diameter, and weigh 4 to 5 lbs. each. Plants are short stemmed, erect, with few outer leaves. A remarkably uniform and refined strain of exceptional quality and fair keeping ability. Nine days earlier than Marion Market, and, as plants are smaller, they may be set closer. Recommended for "yellows" infested land only.

Pkt. 15¢; ½ oz. 35¢; oz. 65¢; ¼ lb. \$2.35.

Burpee's Surehead

Market Gardeners' Strain

Pkt. 15¢; 1/2 oz. 35¢; oz. 65¢; 1/4 lb. \$2.35.

120 days. Selected for resistance to "yellows" from the famous Danish Ballhead and requires about the same time to come to maturity. Pkt. 15¢; 1/2 oz. 35¢; oz. 65¢; 1/4 lb. \$2.35.

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. Where summers are cool, seed may be sown in spring, but in the vicinity of Philadelphia, seeds sown early in August have proved to give the best results. A packet will sow about 25 ft. of row, an oz. about 200 ft.

73 days. Deserves to be largely planted, as it is an early and sure-heading Chinese Cabbage, growing 18 to 20 in. tall and about 4 to 5 in. thick. The firm, well-blanching, white heads start near the top. Leaves are broad, smooth and fringed at the edges. For market and roadside sales, Chihli is extensively grown because the large, attractive heads sell readily; it is the most popular for the home garden. Very crisp and tender; excellent eating—raw or cooked. **Pkt. 15¢; ½ oz. 35¢; oz. 60¢; 1¼ lb. \$2.15.**

Burpeeana—the Super Snowball Cauliflower

247 Early Snowball

85 days. Splendid garden variety and largely used for forcing in the greenhouse and frames. Valuable for the early market; it stands shipping well. Plants are dwarf; heads grow 6 in. and more in diameter and have a smooth, compact, snow-white curd of the best quality. The weight about 2 lbs. each and often more if grown under favorable conditions. **Pkt. 15¢; 1/4 oz. \$1.00; 1/2 oz. \$1.85; oz. \$3.50.**

245 Burpee's Dry Weather

95 days. Though cauliflower does best in a cool and moist season, we have in "Dry Weather" a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a cauliflower of the highest quality, producing large, pure white heads ten days later than Burpee's Best Early. The heads are larger than those of that famous variety, and weigh 2 to 3 lbs. each. If you have been unsuccessful in getting cauliflower to head, we suggest you give Dry Weather a trial.

Pkt. 15¢; 1/4 oz. \$1.00; 1/2 oz. \$1.85; oz. \$3.50.

252 Improved Holland Erfurt

85 days. An especially fine strain of this important variety; very popular on Long Island as well as in other leading cauliflower sections. Plants are fairly short stemmed, really uniform in maturity; heads are flat, hard and compact, and definitely of the true Erfurt type, of which this is the best strain available. Sells readily.

Pkt. 25¢; 1/4 oz. \$1.50; 1/2 oz. \$2.75; oz. \$5.25.

254 Danamerica

85 days. Of the Snowball type, notable for its ability to form large, compact, globular heads under unfavorable growing conditions. Valuable for home and market, especially in regions where cauliflower growing is difficult. An extra choice Danish variety.

Pkt. 25¢; 1/4 oz. \$1.50; 1/2 oz. \$2.75; oz. \$5.25.

244 Burpee's Best Early

85 days. Of strong growth, with erect, pointed, dark green leaves growing closely about the heads. Grown in good soil, the snow-white heads of extra-fine color and quality measure 6 in. and more across.

Pkt. 15¢; 1/4 oz. \$1.00; 1/2 oz. \$1.85; oz. \$3.50.

258 Veitch's Autumn Giant

130 days. The finest of the late cauliflowers; it produces immense compact white heads 8 to 10 in. in diameter. Like all late varieties, it is recommended for fall crop only and in regions where cauliflower is sure to thrive. Plants are large and very vigorous.

Pkt. 15¢; 1/4 oz. \$1.50; 1/2 oz. \$2.75; oz. \$5.25.

How to Grow Cauliflower

Cauliflower is best grown as a fall crop in the greater part of the United States, although in regions where summers are reasonably cool, sowings may be made indoors or under glass, 30 to 40 days before it is time to set plants in the garden. For a main or fall crop, sow the seed in a specially prepared seed-bed or cold-frame about June 1 and set plants out in early July in rows 2½ to 3 ft. apart and 1½ to 2 ft. apart in the row. A packet of seed will produce about 150 plants; 1 oz. 4000 plants; 2 ozs. are required to produce enough plants for one acre. Days to maturity are from the time the plants are set out in the garden.

CAULIFLOWER BROCCOLI

155 St. Valentine 150 days. A type of broccoli which forms large solid, deep white heads, similar to cauliflower in appearance but requires a longer season to mature. Desirable for climates where cauliflower is difficult to grow. **Pkt. 15¢; 1/2 oz. 45¢; oz. 85¢; 1/4 lb. \$3.00.**

CHICORY

297 Witloof (French Endive) 110 days. Sow seed in the spring, dig roots in the fall; place them upright, close together in boxes and cover with 10 in. of sand, light soil or peat moss. Water and keep in a warm place indoors. When the sprouts break through the surface, the tight blanched heads of young leaves are ready for use as a delicious salad. **Pkt. 10¢; oz. 65¢; 1/4 lb. \$2.00.**

296 Asparagus or Celery 100 days. The young dandelion-like leaves make a tasty salad and may be cut several times in a season, as new growth appears after each cutting. Use either blanched or green. **Pkt. 10¢; oz. 75¢; 1/4 lb. \$2.25.**

COLLARDS

299 Georgia 80 days. Produces a loose rosette of large, succulent, cabbage-like leaves which make delicious boiling "greens." Popular in the South; deserves to be better known everywhere. 2 to 3 ft. **Pkt. 5¢; oz. 15¢; 1/4 lb. 45¢; 1/2 lb. 75¢; lb. \$1.25.**

CRESS

Both the types of Cress offered below are grown for the refreshing piquancy of the leaves, being used as an appetizing salad, greens or for garnishing various dishes. At their best when young; succession sowings should be made for a continuous supply.

364 Fine Curled (Pepper Grass) 40 days. It grows very quickly and is of the easiest culture. The finely cut leaves may be used for flavoring salads, for garnishing, or as a green in sandwiches. Used with lettuce, it adds an agreeably pungent taste; best if used when young. *Crop is very short.* **Pkt. 15¢; oz. 55¢.**

365 Upland 60 days. Leaves are dark green, thick, broad and grow in a rosette early in the spring. At this time they are crisp, tender and of the same pungent flavor as Water Cress, the crop of which has been a total failure this year. May be used until seed stalks begin to form. *Crop is very short.* **Pkt. 10¢; oz. 45¢.**

224 BURPEE'S GOLDINHART CARROT

217 Early Golden Ball — Known as French Forcing

60 days. The earliest of all carrots. Bright orange skin and flesh. Useful on heavy or shallow soils where long varieties may become rough or misshapen. Exceptionally sweet. Easily harvested.

How to Grow Carrots

Sow seed thinly in early spring in rows not less than 12 in. apart and make succession sowings every two weeks up to the early part of July. Cover with ½ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest carrots. For nice, tender carrots in the fall or for winter storing, sow seed from the middle of June to first of July. A pkt. will sow about 30 ft. of row; an oz. about 200 ft.

Burpee's
Oxheart

223 Burpee's Oxheart Carrot

75 days. Splendid midseason carrot, which may be used while the roots are still small. If allowed to mature, the broad, stocky, heart-shaped carrots will measure 5 to 5½ in. long and 3 to 3½ in. across where they are thickest; this gives a large amount of edible flesh which is light orange, tender, sweet, fine grained and of delicious flavor. Because of their shape, they are easy to harvest and do well in shallow or heavy soils where longer carrots sometimes fail to make attractive roots. Fine for home use and busheling rather than bunching.

Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.70.

226 Nantes Half Long—Finest quality

272 **BURPEE'S FORDHOOK CELERY** ©

Famous for Tenderness and Flavor

Burpee's Fordhook is the finest flavored as well as the best fall and winter Celery

130 days. Burpee's Fordhook Celery is, without question, the best fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance, since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a large, tightly folded full heart of the most delicious flavor. Always tender, crisp, without strings, and juicy. The time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. Our special strain of this celery is grown on our Western farms, where conditions are ideal for the production of plump, vital seeds. Yearly selections of outstanding plants are made in order to maintain the high type and purity of Burpee's Fordhook, the finest flavored celery. Pkt. 25¢; ½ oz. 50¢; oz. 85¢; ¼ lb. \$3.00.

266 White Plume—*Highly recommended for the home garden*

112 days. The earliest and the most easily blanching celery; at its best right after digging. Foliage is light green tinted with white. When blanching, the stalks are pure snowy white, tender and crisp, without any fiber or strings. Flavor is rich and nutty. Grown by market gardeners having a local trade, and a favorite in home gardens for fall and early winter use but not recommended for winter storage. Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.60.

282 Giant Pascal—*Also known as Winter King*

135 days. Considered by many the standard winter celery. Plants are large, upright and very heavy. Stalks are tall and thick, solid, stringless, and of a rich, nutty flavor; broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. If properly stored, it will keep in perfect condition throughout the winter months. Whether grown for home or market use, Giant Pascal has always given entire satisfaction. Enormously productive and of good quality. Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.60.

267 Easy Blanching—*Stalks easily blanched pure white*

125 days. A second-early celery which will be ready for use soon after Golden Self-Blanching. Plants make a vigorous, upright yet compact growth, and the stalks are easily blanched. They are thick, solid, heavy, unusually meaty, pure white, crisp, free from any fiber or strings, and of extra-fine flavor. Resembles Golden Self-Blanching but stalks blanch white instead of yellow. Desirable for both home and market gardens. Pkt. 10¢; ½ oz. 30¢; oz. 50¢; ¼ lb. \$1.75.

260 Burpee's Golden Self-Blanching ©

115 days. This is the American-grown seed produced from the dwarf French-grown stock. It exhibits all the excellent qualities of the original, and is shown extensively by home gardeners as well as by market growers. The plants make a compact, dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The quality of this variety is superb. The stalks and heart are crisp, solid, heavy, free from any strings, and of the most delicious flavor, which is delightfully sweet and nutty. Popular. Pkt. 15¢; ½ oz. 45¢; oz. 80¢; ¼ lb. \$2.75.

268 Golden Plume or Wonderful ©

115 days. Splendid early celery developed from the famous Golden Self-Blanching; the stalks, however, are larger. Some gardeners consider it the best early celery in existence. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a solid, full, creamy heart of the highest table quality. The thick, heavy stalks blanch readily to a beautiful light yellow; the flavor is distinctly nutty and rich. Its many good qualities commend it to all growers, whether for home or market. Pkt. 15¢; ½ oz. 40¢; oz. 75¢; ¼ lb. \$2.75.

BURPEE'S CELTUCE

Be sure to grow this new vegetable. It combines the uses and flavors of both Celery and Lettuce. See front cover and page 8.

How to Grow Celery

For the earliest crop, start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. Cover seed with no more than ¼ in. of fine soil. Celery requires a rich, well-manured soil and plenty of moisture for best results. Soil, boards, or celery paper may be used to blanch the stalks. A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants; ¼ lb. for an acre. Days to maturity are from field setting of plants. Allow 10 to 14 weeks to produce plants. Treat seed with Cuproside or Semesan to prevent damping-off of the seedlings.

Celery, continued

276 Utah or Golden Crisp

130 days. An excellent green celery for fall use or winter storing. Matures about 5 days earlier than Giant Pascal. Plants are compact, stalks broad and thick, exceptionally solid, and when blanched are pure white, crisp, and of the most delicious flavor. Had the market practically all to itself in Salt Lake City, but now its fame has spread far and wide. Sure to prove satisfactory.

Pkt. 10¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$2.00.

275 Winter Queen—Blanches quickly

120 days. One of the finest dwarf winter celeries we have ever grown. It resembles Golden Self-Blanching in height and habit, but the leaves are a rich green color and in this respect are not unlike those of Giant Pascal. As it blanches quickly it is ready for home or market much earlier in the fall. The plants make stout bunches of extra-heavy stalks with very large, tightly folded, creamy white hearts which are tender, crisp and of excellent flavor. Valuable for home and market garden.

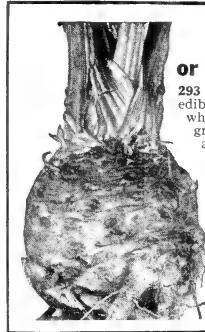

Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.60.

Celeriac

or Turnip-Rooted Celery

293 Giant Prague 120 days. The edible portion is the large, thick root, which should be used when it has grown about 2 in. across. Celeriac has a flavor similar to Celery and is highly valued boiled or used in vegetable soup, stews, and other dishes. It grows best in a moderately moist, yet well-drained soil, which is fairly rich in barnyard manure. Grow as you would celery except that it does not require hilling or blanching. Roots may be stored in moist earth or sand, as you would beets and carrots, and used throughout the winter. Seed crop is very short.

Pkt. 15¢; ½ oz. 35¢; oz. 65¢.

BURPEE'S SWEET CORN

Plant the seed after all danger of frost has passed and the soil has become thoroughly warm. Sow either in rows 2½ to 4 ft. apart, spacing the seeds 4 to 6 in. apart in the row, and thinning later to 12 inches; or plant in hills 3 to 4 ft. each way, allowing 2 to 4 plants to remain in each hill, depending on the fertility of your soil. For a continuous supply, sow varieties which mature in succession; also make succession sowings every 10 to 14 days, allowing enough time for your last planting to mature before the first expected frost in your locality. Sweet Corn maturing in the fall is excellent. Corn should be planted in blocks rather than in a single long row, since pollination and the development of a full set of kernels are then insured. One pkt. will plant 4 rows, each 25 ft. long; 1 lb. 300 hills.

Hybrid Sweet Corn—Wilt resistant

Hybrid Corns are of special value to market growers and canners and many home gardeners because the ears from one planting mature at about the same time; in addition to this uniformity of maturity they are noted for their high yield and resistance to Stewart's disease or bacterial wilt. If you prefer to plant ears from one sowing over a longer period, plant an open pollinated or standard variety of corn. To produce Hybrid Sweet Corn, crosses between an inbred strain and a standard variety or crossing two inbreds must be done each year. Seed saved from hybrids will not come true to type the following year. You must get new Hybrid Sweet Corn seed each year.

How to Grow Cucumbers

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing in late June or early July to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure in the hills and a side-dressing of commercial fertilizer are usually beneficial. Plant in hills 4 or 5 ft. apart, placing 8 to 10 seeds in each hill, and cover with ½ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a hill. One pkt. of seed will plant 15 hills; 1 oz. 50 hills; 2 lbs. for one acre. If seed is drilled, one acre requires about 4 lbs. of seed. Control cucumber insects with Red Arrow Garden Spray and Slug Shot Dust.

The terms "White Spine" and "Black Spine" refer to the color of the over-ripe fruit. "White Spine" varieties turn creamy white when old; "Black Spine" varieties turn to a yellowish-orange when matured. All the Pickling Cucumbers listed below belong to the black spine group, as does Improved Long Green; all others that we offer are white spined.

Burpee's Black Beauty Egg Plant

EGG PLANT

A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in boxes or shallow pans, 8 to 9 weeks before the time to set the plants in the open ground. When seedlings are about 3 in. high, plant singly into small pots, setting the plants in the open when all danger of frost is past and the soil has become thoroughly warm. One pkt. of seed will produce about 100 plants; 1 oz. 2000 plants; 1/4 lb. will produce enough plants for one acre. White
Boston

476 Burpee's Wayahead ☉

77 days. A favorite with both home and market gardeners, as it combines good appearance with excellent quality. Highly recommended as a spring and fall lettuce for planting in the open or in frames. It is a vigorous, healthy variety, forming plants of medium size with shiny, bright green blistered foliage. The buttery heart is a beautiful creamy yellow. Heads well under adverse conditions, such as drought and hot weather, which likely explains its widespread popularity. Selections are being made in our test plots each year in order that our seed stocks may be produced from hardy-resistant plants. Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

Butterhead Varieties

These grow to good size and develop solid heads of good form, resembling a small cabbage in appearance. The heart is tightly folded and blanches to a light golden or buttery yellow. In hot weather sections, they may not head as readily as the Crisp-Head varieties but will grow rapidly and produce tender, tasty leaves of delicious flavor. The Butterhead class includes a number of well-known varieties. Days given are from the time of sowing the seed until lettuce is ready for cutting.

480 White Boston ☉

80 days. One of the most successful and largest selling of all butterhead lettuces. The large heads are tightly folded over the top so that the solid heart blanches to a bright creamy yellow of high quality and fine texture. The outer leaves are a uniform light green, entirely free from bright markings or reddish tinge. Used extensively for market plantings, both under glass and in the open in the Eastern States, and for home gardens throughout the country. Because of the public preference for an entirely green leaf lettuce, White Boston is replacing Big Boston to a great extent in many sections. Our strain is very uniform and shows high resistance to tipburn. White seeded.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

475 Big Boston — Very widely grown

83 days. Medium large, attractive heads, the outer leaves being light green, smooth, and tinged reddish brown at the edges. Heads particularly well during cool weather, forming a tightly folded light golden yellow heart of beautifully blanching, tender, juicy leaves.

Pkt. 10¢; oz. 20¢; ¼ lb. 60¢; ½ lb. \$1.00.

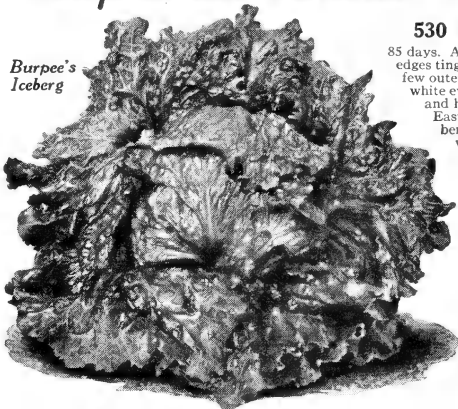

474 Early May King — The earliest to head

75 days. Quick growing, hardy lettuce with medium-sized, tightly folded heads with few outer leaves. Leaves slightly edged brown. The inside of the head is bright yellow while the heart is blanching to a delightful light creamy yellow color. Plants are short, compact and practically all head. Valuable for outdoors or for forcing in greenhouse or frames. The earliest of the butterheads.

Pkt. 10¢; oz. 20¢; ¼ lb. 60¢; ½ lb. \$1.00.

Crisp-Head Varieties

Burpee's
Iceberg

These form tightly folded heads, and where the plants are grown singly at a suitable distance apart, they make very large, round, solid heads which are blanching silvery white or creamy yellow in the center.

530 Burpee's Iceberg ☉ — The original Iceberg

85 days. Attractive light green, wavy, fringed and heavily savoyed leaves with edges tinged with light brown. The heads are compact, not too large, and have few outer leaves and most delicious, crisp, tender hearts blanching to a silvery white even under average garden conditions. Iceberg is exceedingly vigorous and hardy, so that it will withstand some hot weather; it is well suited to Eastern and Mid-Western growing conditions. This is the original Iceberg lettuce introduced by Burpee in 1894. It should not be confused with the familiar "New York and Imperial" strains of lettuce, which are commonly called "Iceberg" by growers, shippers and some produce merchants. Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

522 Hanson — Very dependable header

85 days. Grows into a quite broad, slightly flattened head of beautiful light green, savoyed and curled leaves of crisp texture. Entirely free from any bitter taste, of the highest quality—mild, tender, juicy and well blanching. Its reliability for sure heading, even during midsummer, is widely known and has given it much of its deserved popularity. A wonderful home garden variety for summer use.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

531 Imperial 44 ☉ — Blight resistant

84 days. Sure header, even during hot, dry weather, and of great commercial value. To date, Imperial 44 is the most dependable crisp lettuce for the East. Heads medium large, slightly flattened, extremely compact; dark green, heavily savoyed leaves. If you have had difficulty growing head lettuce, give Imperial 44 a careful trial. White-seeded. Pkt. 15¢; oz. 40¢; ¼ lb. \$1.25; ½ lb. \$2.25.

529 Imperial 847 ☉ — Blight resistant

84 days. Heat-resistant strain with nearly as much ability to head under unfavorable conditions as Imperial 44. The head is larger and deeper and it retains its marketable appearance longer than that variety. Attractive and of good quality. Black-seeded.

Pkt. 10¢; oz. 30¢; ¼ lb. 85¢; ½ lb. \$1.50.

484 Mignonette — The smallest of the crisp-heads

80 days. Splendid black-seeded early lettuce of good quality; outer leaves are medium green tinged with reddish brown, heavily but finely crumpled and curled. Heads are small, compact and blanch light creamy yellow throughout. It heads well in warm weather.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

Crisp-Head Lettuce, continued

85 days. The standard crisp-head lettuce with large heads of dark green, heavily curled and savoyed leaves with blanching, silvery white heart. Successfully grown outdoors almost anywhere, spring, summer and fall. Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

527 New York P.W. 55 — Very early

80 days. A small, extra-early crisp-head lettuce that will withstand quite hot weather, so is well adapted for summer growing in the East, South and Middlewest. All-America Winner.

Pkt. 15¢; oz. 40¢; ¼ lb. \$1.25; ½ lb. \$2.25.

473 Cosbia 40 — Sure header from spring sowing

80 days. The frame of Cosbia 40 is small, the leaves medium green and the head is large in proportion to the size of the plant, weighing about three-quarters of a pound when trimmed. The solidity of the head compares favorably with that of Imperial 44; Cosbia 40 is a few days earlier, more resistant to tipburn, and, while smaller, is still large enough for home and local market use.

An "Iceberg" type lettuce that can be grown in sections with hot summers. Recommended only for spring planting.

Pkt. 15¢; oz. 40¢; ¼ lb. \$1.25; ½ lb. \$2.25.

Wonderful home garden variety for summer use.

Pkt. 15¢; oz. 40¢; ¼ lb. \$1.25; ½ lb. \$2.25.

Loosehead or Cutting Lettuce

These do not form solidly folded heads, but where the plants are grown singly at a suitable distance apart, they make a large, round, thick bunch of leaves which are blanch to a light green or creamy yellow in the center of the plant. The leaves are heavily curled or crumpled, attractive in appearance, and of delightful crispness and mild flavor. They are splendid to provide an extra-early supply of delicious salad, for when just a few inches tall, the thinnings may be used for the table. They are fine also for growing in the greenhouse during the winter.

485 Grand Rapids — Of excellent quality

45 days. Widely grown non-heading lettuce with intensely fringed and curled leaves. Used extensively for forcing in the greenhouse during winter, but is not less valuable for growing outdoors during the spring, summer, and fall. Thick sowing will give an abundance of young tender leaves very early in the season, but if the plants are spaced 12 to 18 in. apart each way, they will produce immense round masses of tender, juicy, light green leaves of good flavor. Most attractive of this group.

Pkt. 10¢; oz. 20¢; ¼ lb. 60¢; ½ lb. \$1.00.

497 Early Prizehead — Crisp, sweet

MUSKMELONS (CANTALOUPE)

The most suitable soil for melons is a rich, warm, sandy loam. Sow the seed after the soil has warmed up and the weather is quite settled, putting 8 to 10 seeds in a circle in slightly raised hills and cover the seed with one inch of fine soil. The hills should be spaced 4 to 6 ft. apart each way. Thin to 2 or 3 plants to a hill after the plants are well established. Well-rotted manure placed beneath the hill and side dressings of commercial fertilizer after the plants have begun to grow are usually beneficial. A pkt. will plant 12 hills; 1 oz. about 50 hills; 3 lbs. are enough to plant an acre.

Netted Gem

544 Burpee's Netted Gem ☉

This variety is also known as "Rocky Ford"

The flesh is green and so sweet and luscious that it may be eaten close to the rind. Fruits are oval-shaped, firm and solid, weighing $1\frac{1}{2}$ to 2 lbs. each, slightly ribbed, with a medium sized seed cavity. Other melons have been bred from it, but none of these surpass Burpee's Netted Gem in table quality.

How to Grow Watermelons

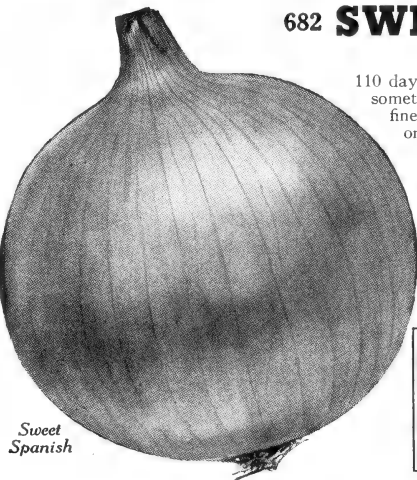

Rich, rather sandy soils produce the finest crops of watermelons, but a well-drained loam is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil under each hill. Watermelons should not be planted until the weather is quite warm. The hills should be about 6 to 8 ft. apart. Place 6 to 8 seeds in a circle in each hill, and cover ½ in. deep with fine soil. Thin to 2 or 3 plants in each hill. Larger and better watermelons can be obtained if all but 2 or 3 are removed from each vine. One pkt. will plant 10 hills; 1 oz. 30 hills; 3 to 4 lbs. for one acre.

682 SWEET SPANISH ONION

UTAH STRAIN

110 days. The very large, globe-shaped Spanish Onions, which are sometimes incorrectly called "Bermudas," are exceptionally mild, fine grained and sweet—excellent when cooked or for use in salads or other ways without cooking. They are remarkably uniform, have light yellow skin and pure white, firm, crisp, and tasty flesh. Although no onions of this type will keep as long in storage as Yellow Globe Danvers, Southport, or Ebenezer, Utah Sweet Spanish will stand shipping and storage for short periods better than Prizetaker, Gibraltar or the Bermuda varieties. Onions of the Spanish type grow to the largest size when they are planted to form their bulbs during the short days of spring or fall. In northern states, seed is usually started early. **Pkt. 15¢; ½ oz. 50¢; oz. 95¢.**

Sweet Spanish

How to Grow Onions

The soil best suited to grow onions is one that is reasonably fertile, well drained, and well prepared. Sow seed as early in the spring as the ground can be worked, in rows 1 to 1½ ft. apart. Cover the seed lightly. If fully matured onions are wanted, thin the seedlings when 3 to 4 in. tall, to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. Store in a dry, free-from-frost place over winter. A pkt. of seed will sow 25 ft. of row; 1 oz. 200 ft.

684 White Sweet Spanish—Utah Strain

676 Early Yellow Globe—Fine keeper

102 days. Beautiful globe-shaped, deep yellow skinned onion with clear white flesh of mild flavor. Extremely early and unusually large; an enormous cropper and a good winter keeper due to the thick, tight skin of the bulbs. **Pkt. 15¢; ½ oz. 50¢; oz. 95¢.**

Have a Victory Garden

672 Ebenezer

One of the best winter keepers, remaining in good, hard condition until spring. Grown extensively for sets because of their good keeping quality, heavy yield and the fact that a smaller percentage of the sets run to seed than other yellow-skinned onions. **Pkt. 10¢; ½ oz. 35¢; oz. 65¢.**

687 Red Wethersfield

112 days. The skin is deep rich purplish red, smooth and glossy. The flesh is white, lightly tinged with pinkish rose near the skin; fine grained and firm. The flavor is strong. Wrinkled-Seeded Early Peas

Wrinkled-seeded peas are favored by many home gardeners, as well as market growers and canners, because of their extra sweetness and better quality. Contrary to popular belief, they can be planted as early as the smooth-seeded varieties—as soon as the soil can be prepared, but do not sow in cold, wet ground or seed is liable to rot.

GARDEN PEAS

Every home garden can easily produce enough peas to supply the table for many weeks. For a continuous supply sow the early, midseason, and late varieties as early in the spring as the soil can be prepared. Both wrinkled and smooth-seeded types can be planted early. Besides sowing at the beginning of the season varieties which will mature one after another, also make succession sowings at intervals of 10 to 14 days up to about June 1. Sow again in August for a fall crop. Cover the seed 1 to 2 in. deep. Provide supports for the tall-growing varieties. Inoculation of seed with Legume Aid before planting hastens maturity and increases the yield. A pkt. of seed will sow 20 ft. of row; 1 lb. 100 ft.

Smooth-Seeded Early Peas

731 Burpee's Best Extra-Early ☉

60 days. A favorite medium-tall, extra-early, smooth-seeded variety. Pods are blunt ended, light green, and grow 2½ to 3 in. long. Vines do not require supports.

Seed is smooth, showing slight dimples. Because of its dwarf habit, Radio is ideal for the home garden; also used for local markets.

How to Grow Peppers

Seed should be sown in a hot-bed or in a shallow box in a warm place in the house, allowing 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is past. Peppers prefer a moderately light, well-fertilized soil. They should be set in rows 2 to 3 ft. apart, spaced 18 to 24 in. apart in the row. A pkt. of seed will produce about 100 plants; 1 oz. 1500 plants; 4 to 6 ozs. will furnish enough plants for one acre. Treat seed with Cuprode or Senesal to prevent damping off. Days to maturity given in descriptions are from the time the plants are set in the garden.

BURPEE'S RADISHES

*Burpee's
Red Giant*

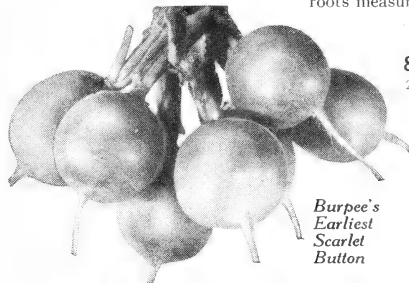

If your garden includes some of each of the three different classes of radishes—spring, summer, and winter varieties—it will easily keep you supplied with this refreshing vegetable practically all year around. A moderately light soil produces the smoothest and best roots. Sow the seed of **spring and summer radishes** as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering $\frac{1}{2}$ in. deep. Thin small varieties to stand 1 to $1\frac{1}{2}$ in. apart in the row; larger varieties, 3 to 4 in. apart. Make succession plantings every week until early summer, then resume one month before frost. Seed of **winter radishes** is sown from the middle of June to the middle of August. A pkt. will sow about 20 ft. of row; 1 oz. 100 ft.

Spring Varieties

910 Burpee's Red Giant ☉

29 days. This remarkable radish combines large size with tender crispness and mild flavor. The roots, even though they grow to the enormous size of $1\frac{1}{2}$ in. in diameter, are as crisp as ice if grown quickly. The skin is bright scarlet-red. The flesh is pure white and has a most delicious flavor. It grows to perfection in rich, loose, well-prepared soil. Pick Red Giant when $\frac{1}{2}$ in. in diameter; or ten days later when roots measure $1\frac{1}{2}$ in. or more—it's always crisp, sweet and tender.

Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢; $\frac{1}{2}$ lb. \$1.50.

*Burpee's
Earliest
Scarlet
Button*

877 Burpee's Earliest Scarlet Button ☉

25 days. Perfectly round, bright scarlet radish, about 1 in. in diameter with bright scarlet, thin, tender skin and icy white flesh which is crisp and juicy. It has a mild, delicate flavor. Its earliness, the beautiful bright scarlet color, and its unusually brittle and delicious quality make it most desirable for home gardeners and the larger growers as well, either outdoors or under glass. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

886 Crimson Giant Globe

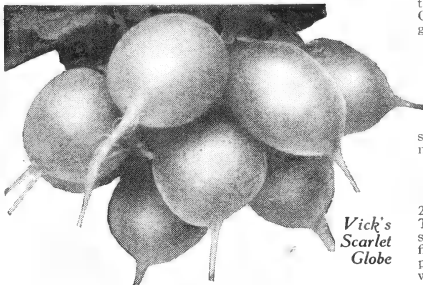

29 days. Sweet, crisp, juicy, brittle, and a wonderful yielder. A fine giant bright red radish. This radish differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a perfect globe, 2 in. in depth, $1\frac{1}{2}$ in. in diameter, with thin, tender skin of deep crimson and solid white flesh. It is a very popular variety, of large size and the finest quality. Early, notwithstanding its size. Sow seed thinly to permit full development of the roots, and for the biggest radishes see that the soil is moderately moist, fertile and deeply prepared. Crimson Giant should be thinned to a wider spacing than smaller varieties; we suggest leaving at least 2 in. between plants for full development.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

883 Vick's Scarlet Globe ☉

24 days. This grand radish has established a good reputation as a forcing sort. Grows round to olive-shaped, bright scarlet radishes, 1 in. in diameter. It is crisp and tasty, with fine white flesh and a medium-sized top; right for bunching. Does equally as well outdoors for either the market or home garden.

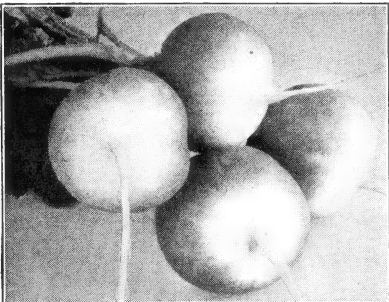

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

*Vick's
Scarlet
Globe*

893 Sparkler—Attractive, scarlet heavily tipped white

25 days. Choice early variety that is a superior strain of the old Scarlet Turnip White Tip. Small round roots, $1\frac{1}{4}$ in. in diameter, with bright scarlet top, a clear white base, and small, slender tap-root. The juicy flesh is pure white and of an agreeable snappy flavor. Our stock of this popular variety is perfectly uniform and remarkably fine. While the white-tipped Scarlet Turnip Radish has long been a favorite, the Sparkler strain is unusually desirable. A very attractive radish for bunching or market; an excellent forcer. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

Sparkler Radish

Radishes do best in loose, deeply prepared soil and when growth is quick and steady. Where summers are hot, succession sowings of the so-called spring varieties should not be made from the middle of May until early August. Summer Radishes require longer to mature than spring varieties so are better adapted to summer culture. Winter Radish seeds are sown in the summer for fall and winter use. Grow your favorites from all three groups.

Collection

Three Extra Fine Radishes

If you live where summers are not hot, sowings of Spring Radishes at 10-day intervals from early spring until May 15 and again in August will provide you with a continuous supply for your table. We have selected three very choice varieties for this offer:

Rapid Red, Sparkler, and White Icicle.

7015—3 Pkts., 1 of each, round red, round red and white, and long white (value 30¢), for only **25¢**
7016—3 Ozs., 1 oz. of each of these three separate named varieties (value 75¢) for only **55¢**

878 Burpee's Rapid Red Radish

23 days. A radish everyone should plant; it is early, of fine quality, refined, smooth, attractive appearance and pungent flavor. Small, bright red and as round as marbles, $\frac{3}{4}$ in. in diameter, with thin, bright red skin. The flesh is pure white, crisp, and delightfully snappy. Tops are short, making it desirable for growing under glass. The quicker they are grown, indoors or out, the crisper their flesh and the more delectable their flavor.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

Burpee's
Rapid Red

890 Comet — All-America Winner

25 days. Bred to meet the increasing demand for an early radish that has the same qualities as Vick's Scarlet Globe, but with a rounded instead of an olive-shaped root. Comet fills the bill; the roots are globe to olive-shaped, bright scarlet, small tap-roots, and for eating and keeping qualities it is surpassed by none; it will remain crisp and solid for a long time. Tops are large enough for convenient bunching.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

French Breakfast

907 French Breakfast — Oblong shaped

23 days. Oblong or deep olive-shape, $1\frac{1}{2}$ in. long and $\frac{3}{4}$ in. wide. Bright rose-scarlet skin, shading to clear white in the lower portion. The flesh is white, firm, and crisp; juicy, mildly pungent, and tender. A quick grower and exceedingly popular for home or market as well as for forcing. Tops are very short, with radishes showing partly above the ground.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

938 White Icicle — Most popular of all long radishes

28 days. Skin is pure white, thin and tender; flesh is icy white, crisp, juicy, perfectly mild and of a delightfully sweet flavor with just enough pungency to appeal to the appetite. Remains solid, being fully as good when 1 in. across as when only $\frac{1}{2}$ in. The roots grow 5 in. in length and are the shape of an icicle, straight and free from side roots. Splendid for either spring or fall use whether for home or market. Thorough and deep soil preparation is advisable to secure well-formed, uniform roots. Should be in every garden.

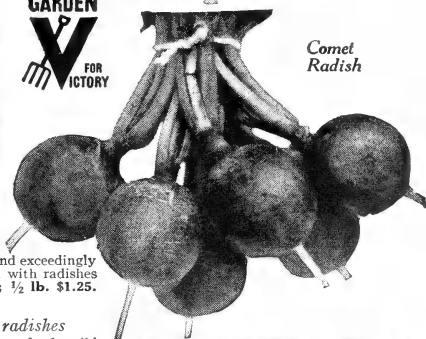

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

Summer Radishes

The following varieties require more time to mature than the spring radishes so that they are becoming ready to use when the others are gone. As they grow more slowly, they endure heat better and are valuable for summer use. Flesh is mildly pungent.

928 Early Long Scarlet Short Top

30 days. Without exception the very best long, brittle red radish. Almost 6 in. in length, and matures in about 4 weeks. Our strain of this beautiful long radish is simply perfection. It is an attractive bright scarlet-red color. The tender, juicy flesh is icy white and of the finest flavor, somewhat more pungent than Icicle.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

953 Long White Vienna or Lady Finger

33 days. Roots 6 to 7 in. long and 1 in. in diameter at the shoulder and slightly tapering. Flesh and skin are pure white; crisp, pleasing flavor. Easily harvested, roots grow $\frac{1}{2}$ above ground.

Pkt. 10¢; oz. 20¢; $\frac{1}{4}$ lb. 60¢; $\frac{1}{2}$ lb. \$1.00.

959 White Strassburg 40 days. Mildly pungent; $4\frac{1}{2}$ to 5 in. long and 2 in. in diameter. Skin and flesh are white. Crisp, tender and of an icy texture.

Pkt. 10¢; oz. 20¢; $\frac{1}{4}$ lb. 60¢; $\frac{1}{2}$ lb. \$1.00.

Winter Radishes

These require cool weather at the finish of their growing season. Sow seed the middle of June, and again in July and August. Excellent for fall and winter use. By storing roots in moist sand in the cellar, fresh, crisp radishes may be had during the early winter. We offer 3 best kinds.

963 White Chinese or Celestialo

60 days. Smooth, pure white roots, 6 to 8 in. long, with a diameter of 3 in. Flesh is crisp, juicy, icy white and of mild flavor—the least pungent of all winter radishes. Roots are so firm that they remain plump and succulent for a remarkably long time.

WINTER SQUASH

Sow seed of winter squashes later than the summer varieties, planting in hills, 8 by 8 ft. each way, and using 6 to 8 seeds to a hill. When plants are about 5 in. tall, thin to 3 plants to a hill. Squash must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. 1038 True Hubbard

About 12 in. long and 10 in. thick. Attractive deep orange-yellow flesh which is fine grained, sweet and dry. This is the standard winter squash for all purposes, whether for home, market or shipping. We offer our own improved strain; it represents the perfection of winter squashes. Weigh about 12 lbs. Light orange skin; deep orange flesh, which is moist, fine grained, and most luscious. A favorite home and market squash of superb quality. More generally grown for pumpkin pie than any of the true pumpkins, and is canned extensively for that purpose. Preferred by many to the drier fleshed squashes for immediate use. The earliest of the winter varieties of squash. Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

1050 VEGETABLE SPAGHETTI

Take it out of the pot, cut open, and you will find a mass of spaghetti-like pulp which is very tasty when seasoned." Fruits are good keepers and can be stored away and used until late in the spring. A curiosity with real value. Pkt. 10¢; oz. 35¢; ¼ lb. \$1.25; ½ lb. \$2.25.

999 **BLOOMSDALE** **LONG STANDING SPINACH** ⊙

*Bloomsdale
Long Standing
Spinach*

48 days. Quick-growing hardy spinach much planted for home and market use as well as for canning. The glossy green leaves are intensely crinkled and blistered, in addition to being of a very heavy texture. Remains in the rosette stage for a long time without bolting; this characteristic adapts it to later spring planting than other strains of Bloomsdale. In addition to spring plantings, it is valuable for sowing in the fall. All these desirable qualities make it a foremost variety in every regard; easy to harvest, easy to clean.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

991 **Burpee's Victoria**

49 days. One of the most popular of all spinach varieties for spring or early summer plantings, for home gardens and market. Plants are vigorous, grow close to the ground, compact at the center, with thick, heavily savoyed, glossy dark green leaves of fine quality. Exceptionally long standing even during warm weather.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

1003 **Virginia Blight Resistant**

42 days. An improved selection which is far superior to the ordinary blight-resistant strains offered. Our strain is almost as curled as our Reselected Bloomsdale, and the handsome, large, dark green, much savoyed and crumpled leaves are extremely crisp, tender, and of upright growth. Quick grower, so should be used as a first-early spring crop. It is also most satisfactory for fall and winter planting, and since it shows considerable cold resistance, it may be successfully over-wintered as far north as Maryland. For sections where mosaic is prevalent, we recommend this variety.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

995 **Bloomsdale Reselected**

45 days. Distinct improvement over the old standard Bloomsdale Savoy. The leaves are of heavy texture, very thick, dark green, heavily crumpled and savoyed. A perfectly hardy variety which may be used for early spring sowing or for planting in the fall to winter over.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

The Hot Weather or Everlasting Spinach

70 days. This plant, when prepared for the table, so greatly resembles spinach in appearance and flavor that most people will not be aware of the difference. It makes strong plants which resist heat and give an abundance of rich green foliage all during the summer and fall. Sends out fresh growth continuously after being cut so that a supply of "greens" may be had until frost destroys the plants. Both the young stem tips and leaves are fleshy and brittle and of the finest quality when cooked. Plants are not hardy; they attain a spread of 4 ft. when fully grown.

Pkt. 10¢; oz. 35¢; ¼ lb. \$1.25; ½ lb. \$2.30.

How to Grow Spinach

Spinach is a cool weather crop and may be sown very early in the spring, either broadcast or in rows 18 to 24 in. apart; cover the seed with 1 in. of soil and thin plants to stand 5 or 6 in. apart in the rows. Make successive sowings until early summer; for fall use, sow from Aug. 10 to Sept. 15 and for early spring use, south of Pennsylvania, sow in Sept. and cover with a few inches of hay, leaves or litter. A pkt. will sow 25 ft. of row; 1 oz. 100 ft.

New Zealand or Everlasting Spinach

BURPEE'S SWISS CHARD

Swiss Chard replaces spinach during the hot weather and yields heavily wherever beets can be grown. Sow the seed at any time from early spring until midsummer in rows 18 to 30 in. apart; cover with $\frac{1}{2}$ in. of soil and thin the seedlings to stand 8 to 10 in. apart

in the row. The plants are quite hardy and will yield throughout the summer and fall until frost. The leaves are prepared like spinach, the white mid-ribs like asparagus or cook both together. A pkt. will sow 25 ft. of row; an oz. 100 ft.; 4 lbs. per acre.

153 Burpee's Rhubarb Chard

60 days. A new Swiss Chard that looks like Rhubarb. The leaf-stalks, considered by many as the most delicious part of the Chard plant, are bright but delicate, translucent crimson; the rich color extends out through the veins into the dark green, heavily crumpled leaves. Easily grown, thrives everywhere. You will enjoy the different, tasty, delicious flavor of Burpee's Rhubarb Chard. Whether you cook the leaf-stalks alone, use only the leaves, or cook both together, you will find a sweetness you never knew existed in a leafy vegetable. Plants are so beautiful they may be used in flower borders. Leaves and stalks are nice in flower arrangements. Pkt. 15¢; oz. 60¢; $\frac{1}{4}$ lb. \$2.25; $\frac{1}{2}$ lb. \$4.25.

135 Burpee's Fordhook Giant

60 days. The rich green leaves are much crinkled or savoyed, and when grown well they will measure 10 in. in width and $2\frac{1}{2}$ ft. in length. The texture of the leaves is thick and fleshy. The light green leaves grow to a very large size, are in width and make an excellent dish prepared like asparagus. Plants are truly of giant size, yielding a heavy crop of "greens" through the summer and fall.

Pkt. 15¢; oz. 35¢; $\frac{1}{4}$ lb. \$1.25; $\frac{1}{2}$ lb. \$2.30.

137 Lucullus 60 days. Well-known variety of Swiss Chard for which some culinary experts claim first place on account of its mild, spinach-like flavor. The light green leaves grow to a very large size, are heavily savoyed, crumpled and tender when cooked. The thick white stalks are splendid for creaming like asparagus and provide a most appetizing dish.

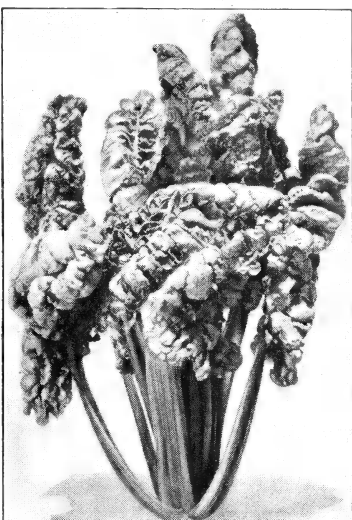

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 85¢; $\frac{1}{2}$ lb. \$1.50.

136 Large Ribbed White 60 days. Large, smooth leaves of thick texture grown mostly for the broad, white, tender mid-ribs. The green, succulent foliage may be used as "greens," being cooked like spinach; has a nice flavor.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 85¢; $\frac{1}{2}$ lb. \$1.50.

1002 Perpetual or Spinach Beet 50 days. A form of leaf beet somewhat similar to chard. Resistant to heat. The dark green leaves make a good summer substitute for spinach. Quick grower. One sowing provides "greens" all through the summer.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 85¢; $\frac{1}{2}$ lb. \$1.50.

BURPEE'S TOMATOES

Tomatoes should be in every garden. It is quite simple to grow your own plants. Sow the seed in a hotbed, or in a shallow box in the house, allowing 5 to 6 weeks to produce plants large enough for setting outdoors when weather becomes warm. Sow in rows 3 in. apart and cover with $\frac{1}{2}$ in. of soil. When plants are about 2 in. tall, transplant to stand 4 in. apart each way, or pot singly

in 3 in. pots. Plant outdoors when all danger of frost is past, in rows 4 ft. apart and 3 or 4 ft. apart in the row. A pkt. will produce about 200 plants; 1 oz. 2000 plants; 2 ozs. will furnish enough plants for one acre. Days to maturity are from field setting of the plants. Treat seed with Semesan or Cuproside to prevent damping-off of seedlings caused by soil and seed-borne diseases.

Red Fruited Varieties

Burpee's
Table Talk

1118 Burpee's Table Talk ☉

75 days. A new, all-purpose tomato. The fruit, unusual in that it combines large size with deep globular form, averages 7 to 8 $\frac{1}{2}$ ozs. The shoulder is smooth, there is little or no depression at the stem end, and the scar is quite small—in other words, it is refined in spite of its size. The color is bright scarlet, uniform and attractive. Slice Burpee's Table Talk Tomato and you will marvel at the structure and the firmness of its interior. The plant is short stemmed and bushy, but with no self-topping tendency. The leaves are small and set closely together, dark green, thick and firm in texture, forming a dense mass of foliage which protects the fruit.

Pkt. 15¢; $\frac{1}{2}$ oz. 50¢; oz. 90¢; $\frac{1}{4}$ lb. \$3.25.

1089C Marglobe, Certified ☉

Burpee's Special Fordhook Strain

73 days. This remarkable strain of Marglobe is the result of many years of selection on our Fordhook Farms. In making our selections, we have stressed heavy vine growth, uniformity of vine and fruit, yield, large fruit size, shipping quality and disease resistance. Letters from satisfied users of our seeds give conclusive evidence of the superiority of this stock. Vines are large and vigorous, giving full protection to the crop. Fruits are globe shaped, rich red inside and out, with thick internal and outer walls and small cells; the flavor is slightly sweet. Marglobe is probably the most important tomato throughout the country for home and market.

Pkt. 15¢; $\frac{1}{2}$ oz. 35¢; oz. 60¢; $\frac{1}{4}$ lb. \$2.00.

1113 Grothen's Globe ☉

68 days. A heavy vined selection from Break O'Day which has given remarkable results as a market tomato in many sections. Fruits are globe shaped, with well-rounded shoulders; average 7 to 8 ozs. in weight; walls are thick and firm; skin is brilliant red, free from yellow color at the stem end. Interior is solid.

Pkt. 10¢; $\frac{1}{2}$ oz. 30¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.75.

1120C Bonny Best, Certified

66 days. One of the most popular second-early tomatoes for both home and market growing and a foremost greenhouse forcing variety. Scarlet-red fruits, flattened globe in shape, are borne on medium sized, vigorous vines. One of the earliest varieties producing marketable sized tomatoes which are smooth, uniform, and suitable for long distance shipping. Adapted to northern states.

Pkt. 15¢; $\frac{1}{2}$ oz. 35¢; oz. 60¢; $\frac{1}{4}$ lb. \$2.00.

1100 Spark's Earliana—Extra early

60 days. This is the original Earliana Tomato which has long been a great favorite with growers who plant the original Spark's Earliana on account of earliness, productiveness, good shape, and rich scarlet-red color. Pkt. 10¢; $\frac{1}{2}$ oz. 25¢; oz. 40¢; $\frac{1}{4}$ lb. \$1.25.

1093 Dwarf Stone—Tree-type plant

83 days. Very choice tomato of dwarf habit, making a distinct, tree-like growth which requires no training. Large, smooth fruits of a bright scarlet-red color; average 4 in. in diameter and are about $3\frac{1}{2}$ in. deep. Pkt. 10¢; $\frac{1}{2}$ oz. 30¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.75.

1089 Marglobe—A most important tomato

73 days. Grown from the same stock seed of our highly selected strain and under the same conditions, but crop was not inspected for certification. Pkt. 10¢; $\frac{1}{2}$ oz. 25¢; oz. 40¢; $\frac{1}{4}$ lb. \$1.25.

1101 Chalk's Early Jewel

1072C Rutgers Certified ☉

74 days. A commercial variety of great importance in most of the Eastern and Southern states. It is suitable for canning, juicing, and for long distance shipping. Large fruit size, $6\frac{1}{2}$ to $7\frac{1}{2}$ ozs., makes it favored over many other popular tomatoes. Globular in shape, slightly flattened, smooth, bright red, and with heavy walls and small cells. Vine is vigorous, heavy, and wilt-resistant to a high degree. Pkt. 15¢; $\frac{1}{2}$ oz. 35¢; oz. 60¢; $\frac{1}{4}$ lb. \$2.00.

1072 Rutgers—Does well on light soils

74 days. Grown from stock seed released by the New Jersey Agricultural Experiment Station but not inspected for certification. Pkt. 10¢; $\frac{1}{2}$ oz. 25¢; oz. 40¢; $\frac{1}{4}$ lb. \$1.25.

1108 Burpee's Matchless ☉

Improved Market Gardeners' Strain

78 days. The best large main-crop tomato. No other main-crop tomato has ever equaled Matchless in size, color, and productiveness. Strong, vigorous growth with sturdy vines which produce an enormous crop of large, handsome fruits that are meaty, rich scarlet-red in color, perfectly smooth, firm, solid and noted for their extremely long-keeping qualities. The flavor of Burpee's Matchless is deliciously sub-acid and tasty. We offer an improved strain.

Pkt. 10¢; $\frac{1}{2}$ oz. 25¢; oz. 45¢; $\frac{1}{4}$ lb. \$1.50.

Red Fruited Tomatoes

1152 Michigan State Forcing

75 days. Developed for greenhouse growing, but just as satisfactory for outdoor gardens. It is especially bred and catalogued for those who train their plants to stakes and prune them to one or two stems, which is an excellent growing method for the home garden. Plants are vigorous, wilt resistant, self pollinating and productive. Fruits are globular, smooth, solid, bright scarlet and weigh about 5 ozs. each. Quality compares favorably with that of Marglobe, the standard by which most red fruited tomatoes are judged.

Pkt. 15¢; ½ oz. 40¢; oz. 70¢; ¼ lb. \$2.50.

1073 Victor—All-America Bronze Medal Winner

60 days. A first-early, heavy cropping tomato with fruit the size and shape worthy of a midseason variety. Developed especially for the Northern States, Canada, as well as dry and mountain areas. Tomatoes are scarlet, very uniformly colored, average 5 ozs. in weight, semi-globular, fairly smooth and refined. Plants are small, short, and may be set as close as 2 ft. apart in the row, thus taking up little space; they are not suited to pruning and staking.

Pkt. 15¢; ½ oz. 45¢; oz. 75¢; ¼ lb. \$2.70.

1079 Bounty—Valuable for small gardens

61 days. Plants are of about the same size as Victor, well suited to close planting in the home garden. The scarlet fruits are slightly larger than those of Victor, smoother, deeper and remarkably free from stem-end cracks. Both varieties are best adapted for growing in the upper half of the United States.

Pkt. 15¢; ½ oz. 45¢; oz. 75¢; ¼ lb. \$2.70.

1097 Burpee's Sunnybrook Earliana

58 days. This is our own strain of Earliana. Earliness, smoothness of fruit and compactness of vine growth have all been stressed in an effort to produce a tomato that is really superior. Fruits are of medium size, scarlet red, solid, fleshy, and with a tart but agreeable flavor. Splendid for home and market.

Pkt. 10¢; ½ oz. 30¢; oz. 50¢; ¼ lb. \$1.75.

1125C Break O'Day, Certified

63 days. Outstanding for its maturity, smooth, uniform, globe-shaped fruits, and resistance to wilt. Plants are large, producing an abundance of medium sized, bright red fruit with thick walls, small seed cavities, and splendid flavor. Best adapted to rich, heavy soils. It is recommended for home and market.

Pkt. 15¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$2.00.

1125 Break O'Day—Resists rust and wilt

63 days. Grown from the same stock and under the same conditions as certified seed of the variety offered above, but growing crops were not inspected for certification.

Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.50.

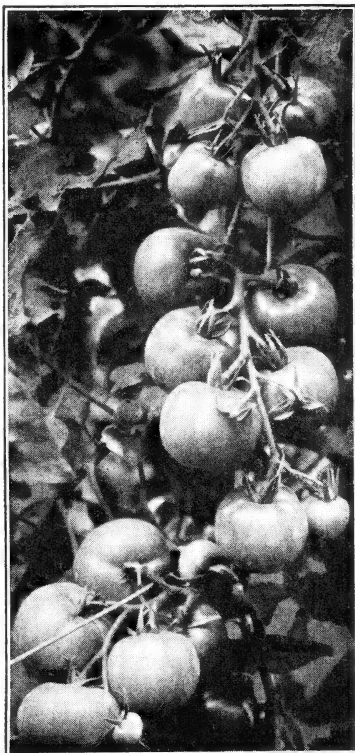

1077 Burpee's Gloriana

55 days. A tomato of the Earliana type, but preceding that variety in maturity by 3 to 5 days and excelling it in quality, fruit shape and appearance, yield, and length of bearing season. The plant is small at the beginning of the season, becoming medium size when fully grown. The fruit clusters are very large. Fruit is medium scarlet-red, semi-globular, neat at the shoulder, with extremely small stem cavity and blossom scar; average weight is 5 ozs.

Pkt. 15¢; ½ oz. 45¢; oz. 80¢; ¼ lb. \$3.00.

Explanation of Certified Seed

Seed listed as "Certified" is produced from crops that were inspected and certified as to trueness to type and freedom from disease by the Agricultural Department of the state in which they were grown.

Michigan State Forcing

1106C Pritchard or Scarlet Topper, Certified

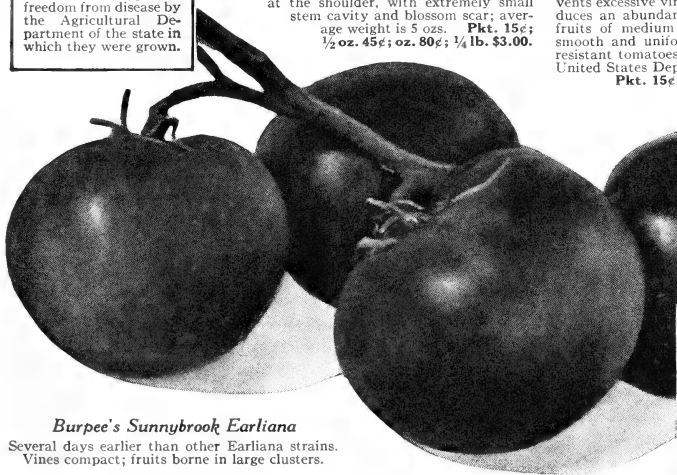

70 days. The ideal all-purpose tomato for growing in soil of high fertility. The "self-topping" habit prevents excessive vine growth under all conditions. Produces an abundant crop of bright red, globe-shaped fruits of medium size and excellent quality. Very smooth and uniform. Another of the popular wilt-resistant tomatoes developed by Dr. Pritchard of the United States Department of Agriculture.

Pkt. 15¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$2.00.

1106 Pritchard

70 days. Identical with the above variety except the crops were not field inspected and certified by the Agricultural Department.

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.25.

Burpee's Sunnybrook Earliana

Several days earlier than other Earliana strains. Vines compact; fruits borne in large clusters.

Vines are very large, widely branched, and well covered with foliage. Fruits are deep, flattened, smooth, and of excellent color, weighing from $\frac{6}{8}$ to $\frac{7}{8}$ ozs. Pkt. 15¢; $\frac{1}{2}$ oz. 35¢; oz. 60¢; $\frac{1}{4}$ lb. \$2.00.

1115 Beefsteak

80 days. The largest red fruited tomato. Resembles Ponderosa in many ways except color—Ponderosa has purplish pink skin while Beefsteak is scarlet-red. The vigorous vines produce an abundance of extra large size fruits which are more or less ribbed. The flesh is a beautiful deep scarlet, juicy, solid, and has a rich sub-acid flavor. Grown extensively by home gardeners.

Pkt. 15¢; $\frac{1}{2}$ oz. 35¢; oz. 60¢; $\frac{1}{4}$ lb. \$2.00.

1081C

Greater Baltimore, Certified

78 days. An important canning variety in the South and Middle-west, because of its resistance to heat and drought. Strong-growing vines bear a heavy crop of red, flattened but deep fruits weighing 6 to 7 ozs. A large fruited, heavy yielding tomato for the home garden and to some extent for market in certain sections.

Pkt. 10¢; $\frac{1}{2}$ oz. 30¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.75.

1081 Greater Baltimore

78 days. A very fine stock of this popular variety. One of the most highly colored of all tomatoes. Good cropper.

Pkt. 10¢; $\frac{1}{2}$ oz. 20¢; oz. 35¢; $\frac{1}{4}$ lb. \$1.25.

Pink Fruited Tomatoes

1092 Burpee's Globe

80 days. Decidedly distinct tomato of superior merit. The strong, healthy vines produce an enormous crop of uniform, medium to large sized, rich, pinkish red tomatoes. The globe-shaped fruits grow in clusters of 6 to 10; solid, meaty, and free from any core. Contains little or no acid and is a shy seeder, the seed cavities being full of solid meat. Excellent for home and market garden where a main-crop pink tomato of solidity and quality with high yielding ability is desired. Adapted to pruning and staking.

Pkt. 15¢; $\frac{1}{2}$ oz. 45¢; oz. 80¢; $\frac{1}{4}$ lb. \$3.00.

1114 True Giant Ponderosa

81 days. Grow extremely large and are full of luscious, juicy flesh. The seed cavities are remarkably small, which accounts for the solid meat. It is not unusual for the tomatoes to weigh 24 ozs. and more, though the average runs around 9 ozs. They are deep, somewhat flattened, and have a most agreeable mild flavor. People who do not care for the acid flavor of the deep red tomatoes will find in Ponderosa a very palatable and tasty fruit of a delightful mild flavor and a good deep purplish pink color. Essentially a home garden tomato although it finds ready sale on some local markets where it is known.

Pkt. 15¢; $\frac{1}{2}$ oz. 40¢; oz. 70¢; $\frac{1}{4}$ lb. \$2.50.

1085 Sweetmeat

66 days. One of the handsomest pink tomatoes we have ever seen, semi-globular in shape, weighing 5 ozs. and more. They ripen evenly throughout and are quite free from cracking. Heavy vines give ample protection to the fruit. Flesh is solid, fine grained and of the most delicious flavor. Sweetmeat fills a definite place as a wilt-resistant pink of second-early season. Color is a uniform bright pink.

Pkt. 15¢; $\frac{1}{2}$ oz. 40¢; oz. 70¢; $\frac{1}{4}$ lb. \$2.50.

1091 Oxheart—Extra large

86 days. One of the largest tomatoes ever introduced, some fruits weighing 2 lbs. each. The oxheart shape of the pinkish red fruits is most distinct; interior is extremely solid with thick, firm walls and small seed cavities with few seeds. Primarily a home garden variety but readily salable on local markets and roadside stands.

Pkt. 15¢; $\frac{1}{2}$ oz. 50¢; oz. 95¢; $\frac{1}{4}$ lb. \$3.50.

1107 June Pink—Also known as Pink Earliana

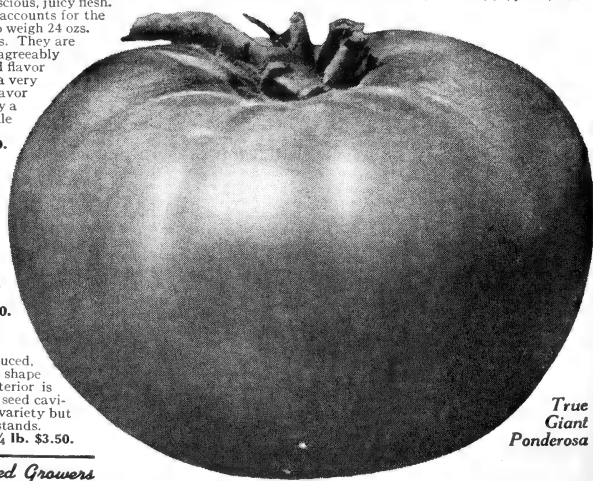

60 days. Fruits are somewhat flattened, weigh 4 to 5 ozs. and have bright deep pink skin and rich pinkish red flesh. The meat is solid and has a delightful sub-acid flavor. It is the earliest pink-skinned tomato, similar to Earliana in all respects except color.

Pkt. 10¢; $\frac{1}{2}$ oz. 25¢; oz. 40¢; $\frac{1}{4}$ lb. \$1.25.

1095 Burpee's Dwarf Giant—Tree type

80 days. Plants are of the dwarf or tree type; fruits are flattened, with rich purple-crimson skin. The meat is fine-grained, juicy, and strong enough to stand shipping well. Desirable home garden variety for those who want to grow large sized tomatoes in a small space.

Pkt. 15¢; $\frac{1}{2}$ oz. 45¢; oz. 80¢; $\frac{1}{4}$ lb. \$3.00.

How to Grow Turnips

Sow the Milan varieties in early spring in rows 12 to 15 in. apart. Thin seedlings to stand 3 to 6 in. apart in the row. For succession, sow at two-week intervals until late May. For fall and winter crop, sow any variety in July or August in rows or broadcast. A pkt. will plant about 50 ft. of row; an oz. 250 ft.; 1½ lbs. for one acre in rows; 2 to 4 lbs. if sown broadcast.

Shogoin Turnip

RUTABAGAS OR SWEDE TURNIPS

Rutabagas require a longer season to mature than turnips and are best grown as a fall crop. Sow seed from late June until early August, in rows 15 to 24 in. apart. Cover with ½ in. of fine soil and thin the seedlings to stand 6 to 8 in. apart in the row. May be stored in a cool cellar or pit and used throughout the winter. All are lovely. With proper selection, blooms can be had from early summer until frost. Annuals are listed on pages 54 to 105. Cultural directions are printed on every bag of Burpee's Seeds.

BURPEE'S ALL-AMERICA *Prize Winners for 1943*

New!
**AMERICA
ALLDOUBLE
PETUNIA**

BURPEE'S NEW PETUNIA

2440 *America Alldouble*

Silver Medal Winner, All-America Selections for 1943

The first Alldouble Petunia ever created in America. Flowers are rose-pink, of medium size, 2 in. and more across. Plants are hybrida nana compacta, 1 ft. in height and 18 in. in width making them ideal for beds, borders or edgings, as well as desirable pot plants. Stems may be obtained up to 10 in. in length which makes them highly adaptable for low vase use. There is an almost lack of the sticky substance found on the leaves and stems of most other petunia varieties; this will be greatly appreciated when picking the blooms.

America Alldouble is among the first of the petunias to bloom and will continue to flower profusely until frost. It is of easy culture and vigorous growth. One of the finest and most novel of the new flowers.

Pkt. (100 seeds) 50¢; 2 pkts. 90¢; 1000 seeds \$3.50.

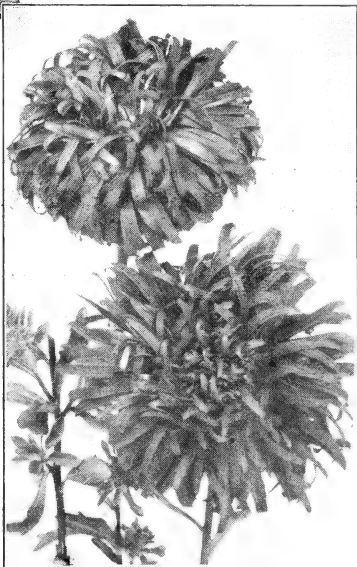

BURPEE'S NEW EXTRA EARLY ASTER

1603 *Navy Blue*

Honorable Mention, All-America Selections for 1943

A new extra-early, giant flowered aster; rather close in form to that of the Giant Crego type. The flowers are large, about 4 in. in diameter, with long ribbon-like, beautifully curled, twisted and interlaced petals of a rich luminous, deep velvety purple-blue color. Plants grow about 20 in. tall, and while they come into flower long before many varieties begin to bud, they will continue to bloom over a long period of time. Stems are long and wiry, 12 in. and more in length; wonderful for cutting. Makes a grand showing in the garden as plants are extremely free blooming.

Pkt. 25¢; ½ oz. 70¢; ¼ oz. \$1.20.

Petunia, Igloo Pkt. 25¢.

2374 Marigold, Honeycomb

Illustrated in color on back cover.

A Dwarf Double African Marigold that is entirely new; its flower form is pleasingly different. Flowers are somewhat like the chrysanthemum-flowered types, but instead of the florets being curled and interlaced, they are erect-like and so arranged as to resemble a honeycomb in appearance, hence the name. Added to this unique flower form is a color that is rich, deep, sparkling and attractive,—a most intense marigold orange. Honeycomb is very early flowering, grows about 14 in. high, and when in bloom is a veritable mass of color. Most effective in beds and borders, and although the plants are dwarf, cutting stems of good length may be obtained; in fact, entire plants when cut are a bouquet themselves. In addition to these good features, the foliage is entirely without the usual marigold odor.

Pkt. 25¢; 1/8 oz. \$1.00; 1/4 oz. \$1.75.

2441 Bush Petunia, Eleanor

The plant habit of Eleanor Petunia is distinctly different, being thickly branched so that the stems figuratively stand up in a bush-like, erect manner, 2 ft. and more in height. Flowers are large, up to 3 in. in diameter, wide open in true hybrid form, light rosy mauve heavily veined carmine-crimson in the throat and becoming lighter as they spread out over the flower, disappearing near the edges. The markings remind one of a salpiglossis. Eleanor Petunia is wonderful for cutting. In the garden it is valuable for beds and borders, and may be used to advantage in back of lower growing petunias or other annuals. Free and continuous bloomer.

Pkt. 25¢; 1/16 oz. 60¢; 1/8 oz. \$1.00.

2442 Petunia, Igloo

Bronze Medal Winner, All-America Selections for 1943

Flowers are of medium size, 1 1/2 in. across, creamy white with a slight shading of yellow in the throat; instead of the dwarf compact plants from early in the summer until frost. If soil is not too rich, plants will grow about 1 ft. tall, very uniform and quite round. Igloo is one of the freest flowering of all dwarf petunias; ideally suited for beds and borders. Nice for cutting.

Pkt. 25¢; 1/12 oz. 75¢; 1/8 oz. \$1.25.

1852 Calendula, Superb Giants

So popular have Calendulas become in recent years that we have prepared a carefully blended mixture of all the largest and best varieties, such as Yellow Colossal, the biggest of all; Yellow Shaggy, chrysanthemum-like; Lemon Giant, Masterpiece, Sensation, Golden Ball, Orange Giant, etc. Fine for beds and cut flowers.

Pkt. (100 seeds) 15¢.

1987 Cosmos, Orange Ruffles

The same golden orange colored flowers as the popular All-America Winner, Orange Flare, but with an extra row of petals which adds charm and grace. It is like Orange Flare in earliness, plant habit and ease of culture. Plants grow 3 ft. and more tall, begin to bloom when quite small and continue without interruption until late fall. The flowers are semi-double, 2 1/2 in. across and are most attractive in the garden or for cutting. Nice with Burpee's Yellow.

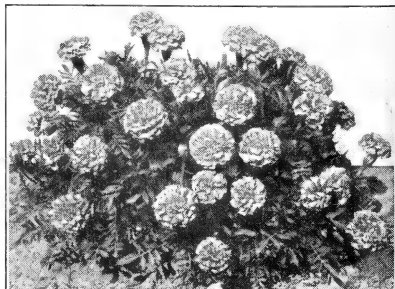

Pkt. 15¢; 1/8 oz. 40¢; 1/4 oz. 70¢.

2381 Marigold, Sunkist

All-America Silver Medal Winner for 1943

The neat, compact plants are ideal for bedding, borders, edgings and pot culture; Sunkist is also suitable for short-stemmed cut flowers.

Pkt. 25¢; 1/8 oz. \$1.00; 1/4 oz. \$1.75.

2365 Marigold, Mayling

By permission, named Mayling in honor of Madame Chiang Kai-Shek. A most outstanding Burpee marigold named for a most outstanding woman. Flowers grow 3 in. and more across, the petals being incurved practically their entire length and daintily fringed on the outer edges. This gives a soft, airy, fluffy appearance to the rich, buttery, golden primrose flowers. The uniform hedge-like plants grow about 2 ft. tall and when in bloom present a gorgeous sight. They are very profuse blooming, beginning early in the summer and continue until frost. Stems average 12 to 15 in. in length, making them desirable for cutting. Mayling is our newest frilled carnation-flowered Tall Double African marigold with odorless foliage. See back cover for color illustration.

BURPEE'S CALEDULAS—SCOTCH OR POT MARIGOLDS

These improved calendas are far superior to the old-fashioned varieties; flowers are larger, longer stemmed, more fully double and of richer colors. Those offered on this page, except where noted, are extra large-flowered and double to the very center. Calendas are of easiest culture, succeeding in ordinary, well-drained soil. Where summers are not too hot, plants will bloom from early summer until frost, and furnish an endless supply of long-lasting cut flowers. Sow seed in early spring and again in early summer to furnish blooms in the cool fall days. 15 to 24 in. tall, depending on the variety.

2295 Golden West It is earlier blooming, larger flowered, dwarfier growing, and more floriferous than Guinea Gold. Flowers are deep orange and grow $3\frac{1}{2}$ in. and more across, with petals loosely and gracefully placed. Plants grow $2\frac{1}{2}$ ft. tall, and are literally covered with flowers all summer and fall. Much like Burpee Gold Improved except that Golden West has foliage with the usual marigold odor. 2277 Golden Crown Dwarf or Tom Thumb form of the popular Guinea Gold; plants grow about 10 in. high. Flowers are large, golden orange, and borne most abundantly. Especially suited for borders or bedding; nice for cut flowers. Pkt. 15¢; $\frac{1}{2}$ oz. 35¢; $\frac{1}{4}$ oz. 60¢.

2180 Guinea Gold Brilliant orange carnation-like flowers flushed with gold. The first marigold of this type to be introduced and still very popular. Foliage has the usual odor. Pkt. 10¢; $\frac{1}{4}$ oz. 30¢; $\frac{1}{2}$ oz. 50¢.

2193 Tetra Flowers have the same attractive carnation-flowered form as Guinea Gold, but are much larger, $3\frac{1}{2}$ to 4 in. across, and of a very deep orange color. Showy in beds and borders. Last well when cut. 2 to $2\frac{1}{2}$ ft. tall. Start seed indoors for earliest blooms. Tetra is the result of the doubling of the chromosomes of the popular Guinea Gold Marigold. Since a plant in which the chromosome number is doubled is technically known as a tetraploid, we have named this new marigold "Tetra." It is as easy to grow as any marigold. Sturdy. Pkt. 15¢; $\frac{1}{2}$ oz. 50¢; $\frac{1}{4}$ oz. 85¢.

Chrysanthemum Flowered Marigolds

Each plant bears a large number of flowers over a remarkably long period of time; they are extremely early flowering, the first blooms appearing in about 9 weeks after the seed is sown and they continue to bloom freely until frost. Being hybrids, some yellow or yellow and red variegated flowers may appear in any planting; these, too, are beautiful.

Dahlia Flowered Zinnias. The
loveliest colors and combina-
tions of colors ever seen.

Pkt. 25¢; 1/8 oz. 50¢.

Burpee's Famous Zinnias

The value of zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They are one of our leading specialties. Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted.

Plant zinnias in full sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in midsummer and continuing until fall. Flowers last for days when cut; different size flowers and colors for every purpose. After the soil has become thoroughly warm, sow seed in the open ground where plants are to bloom. Thin out large flowered varieties to stand 2 ft. apart; smaller flowered types, 1 ft. Zinnias will bloom in about two months. All are easy to grow.

BURPEE'S SUPER GIANT ZINNIAS

3175 Finest Mixed Burpee's Super Giants are the largest of all zinnias, with the loveliest colors and combinations of colors ever seen in this flower. Rare and unusual shades of cream, buff, apricot, salmon, rose and orange predominate, with a few yellows and whites; scarlet and crimson are not prominent, though there are some very attractive flowers in these colors. One is impressed at the many two-tone and three-tone color effects seen in some of the blooms.

Flowers are truly giant, $5\frac{1}{2}$ to $6\frac{1}{2}$ in. across, and of a wide diversity of flower form—some like Dahlia Flowered, others like Giants of California, and still others with curled and twisted chrysanthemum-like flower heads. Striking in the garden; invaluable for cutting. 3 ft. tall.

DAVID BURPEE ZINNIAS CHRYSANTHEMUM FLOWERED GIANTS

2878 Choicest Mixed David Burpee Zinnias are strikingly different; very large, with petals so attractively curled and quilled that the flowers may be likened to large-flowered chrysanthemums. Another outstanding feature of these Zinnias is the unusual range of colors, many that have never before been seen in zinnias. Pastel shades predominate, with tones of apricot, soft cream, chamois, buff, terracotta, burnt orange, soft rose, and peach. Some flowers are of solid colors while others are combinations of two and three colors. Some of the plants have leaves that are long and narrow, curiously curled and twisted and these usually produce flowers the petals of which are extremely quilled and curled. Most desirable for garden use and unsurpassed for cutting. Plants grow 3 ft. tall.

Practically all colors seen in zinnias will be found in this mixture—shades of orange, yellow, rose, and crimson predominate. Seeds were saved from true-to-type flowers but some variations may appear; all are valuable for cutting purposes. 2 ft. Burpee's Giant Dahlia Flowered Zinnias

These Zinnias are outstanding both for the exquisite form of their gorgeous, long-stemmed flowers, which greatly resemble Giant Dahlias, and for the marvelous pastel shades included in their range of color. The individual blooms grow about 5 in. across and 2 or more in. in depth. The well-branched, sturdy plants grow 3 ft. high. Showy in the garden; wonderful for cutting.

2899 Burpee's Fancy Tints Tremendous flowers that grow larger than any other Dahlia Flowered Zinnia. We have selected seed from the choicest specimens, every one of which was more than 5 in. across and about 4 in. deep. The combination of colors is most strange; they shade from old rose on the outer petals through gold to a halo of bright cerise in the center. Plants are base branching, with stems growing 2 to 2½ ft. long. Wonderful for cutting.

BURPEE'S BEAUTIFUL ASTERS

A continuous display of asters from early summer until frost can be had by planting early, midseason, and late blooming varieties. If you plant some very early varieties, we suggest that you have seedlings of other flowers coming along to take the place of the earlier when they are through blooming, thus keeping all your ground occupied during the entire season.

* Varieties marked with an asterisk (*) are the **Wilt-Resistant Strain**. They are highly immune to "Wilt disease" or "Stem-rot."

3087 **Violet Glory Aster** *Earliest of all*

In full bloom before others begin to flower

To those who love the delicacy and richness of asters, this extremely early flowering variety, **Violet Glory**, will be a joy. Blooms in 14 weeks from the time seed is sown; in flower before most other asters begin to bud. It is a beautiful double flower, 3 to 3½ in. across, deep purple-violet, with the center incurving petals displaying a handsome silvery sheen.

The plant is not very leafy, seeming to give all its strength to the flowers, which are freely borne on stems 12 to 15 in. long. Plants are of open, spreading habit, 1½ ft. tall and about 2 ft. across. Extreme earliness and good cutting stems make **Violet Glory** a most welcome new type aster for the home gardener and especially to the florist.

BURPEE'S SNAPDRAGONS

Snapdragons (botanically antirrhinums) have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding in ordinary well-drained garden soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until

frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions on every packet. Best treated as annuals, although they are biennials in sections having mild winters.

Burpee's Giant Ruffled Petunias

Petunia hybrida grandiflora superbissima

Burpee's Giant Ruffled Petunias are unsurpassed for bedding, borders, cutting, and most valuable for porch and window boxes as well as for pot culture. The flowers, with their large, wide-open throats, are deeply ruffled, artistically veined and, when well grown, often measure 5 to 7 in. across. Plants bloom throughout the summer until frost if planted in a sunny situation and given well-drained garden soil that is not overly rich.

Petunia seeds are quite small and most valuable. Sow them carefully indoors in pots or shallow boxes.

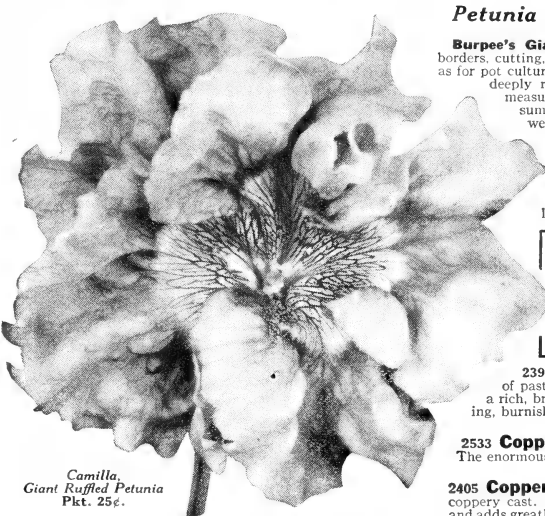

Plants may be set in the open ground where they are to remain after soil has become warm and all danger of cold weather is past. Easily grown if directions on the seed packages are carefully followed. Well worth all the attention you give them.

W. ATLEE BURPEE CO.

Burpee's Annual Larkspurs

One of the most beautiful and desirable flowers for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty when plants are not yet in bloom. We offer your choice of three distinct types.

The culture of annual larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure. As they like cool weather in which to germinate and to grow best, seed should be sown early in the spring as the ground can be worked—the earlier, the better—but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin them to stand 1 to 1½ ft. apart.

BURPEE'S Fragrant NASTURTIUMS

Ever popular plants of the easiest culture, blooming most profusely in ordinary, well-drained garden soil. A soil that is overly rich will cause plants to produce more leaves than flowers. They are then most useful plants for dry, sandy, or gravelly locations.

Nasturtiums may be had in a great variety of shades and color combinations, single or double flowers and tall or dwarf growing. Their varied and brilliant colors, different shapes and refreshing fragrance make them most desirable for cutting.

Double
Nasturtiums

Burpee's Dwarf Double Nasturtiums

Plants are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant, double and semi-double sweet-scented flowers are produced most freely on very long stems which makes them especially fine for cutting. The irregularly placed petals give the blooms an unusually artistic appearance. The dwarf, rounded plants covered with flowers are most attractive in beds, borders, edgings, rock gardens and pot culture. Visitors to our farms are thrilled with the showing that nasturtiums make.

Old-Fashioned five-petaled Single Nasturtium

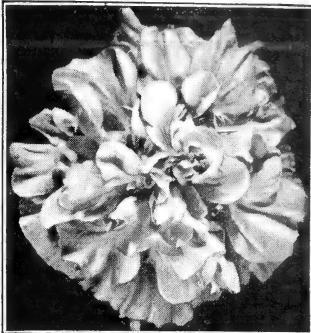

Burpee's Miracle Hybrid Nasturtium Mixture

2334 Double and Super-Double Mixed These Hybrids were created by a combination of mutations and cross-pollinations between Burpee's Super-Double and Burpee's Double Hybrid Nasturtiums. Seed of this wonderful mixture will produce various types of flowers; some will be semi-double, like Golden Gleam, with 8 to 10 petals; others will be Super-Double, with as many as 40 to 60 true petals, like the illustration opposite. Plants are strong growing and produce an abundance of large, long-stemmed, sweet-scented flowers, 3 in. across.

Extreme doubleness and unusually large size of the flowers constitute two of the most important characteristics of Burpee's Super-Double Nasturtiums (*Tropaeolum majus* Burpeei); when fully open, they resemble greenhouse carnations. Stems of the Super-Doubles are thicker and the plants sturdier and more vigorous than other nasturtiums. All plants will be of the tall Gleam type, adapted for beds, wide borders, ground cover, or trained upon strings or wire. They may, however, be cut back if a dwarf effect is desired in beds, borders or rock gardens.

Burpee's Super-Double is the only Nasturtium to be given a Plant Patent. Plants grown from our Miracle Mixture seed are protected by U. S. Plant Patent No. 141. Seeds are sold under such conditions.

Packet of 10 seeds for \$1.00; 3 packets for \$2.50.

May be trained upon strings or wire. Valuable for cutting, as flowers are borne on long, strong stems and keep for a long time.

Burpee's Giant Pansies

Pansies always have been a great specialty with us and we are justly proud of the quality and trueness to type of our strains. Pansies succeed best in rich, well-drained soil in a sunny position, and produce their finest flowers in the cool, early days of spring. Keep flowers picked during the summer, plants pinched back, and you will get a nice lot of flowers again in the fall. For earliest blooms, start seed indoors four to six weeks before your outdoor planting time.

Burpee's Annual Phlox

One of the easiest grown and most satisfactory of all summer-flowering annuals. No other flower can surpass their brilliant colorings. A native of Texas and is known as "Texan Pride." Grows and thrives in any kind of soil in a sunny position, but prefers a light, rich loam. Begins to bloom in early summer and continues until fall if faded flowers are removed. Fine for bedding, borders, edgings and cutting. 6 to 15 in. tall.

Tall Giant Flowered Phlox

(*Phlox Drummondii gigantea*)

The largest flowered of all annual Phlox; individual florets are 1 1/4 to 1 1/2 in. across and borne most freely in massive trusses on strong, upright plants 10 in. tall. Excellent for beds, borders, edgings and cutting. A much improved strain of this favorite flower. Every variety has been a winner in the All-America Selections, which is a testimonial of their high value.

EARLY FLOWERING SWEET PEAS

Burpee's Early Flowering Sweet Peas come into bloom outdoors before the summer heat arrives—3 to 4 weeks earlier than the Giant Spencer varieties. They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep, rich soil which must be well drained.

Many of the Early Flowering Sweet Peas, as well as the Giant Spencers, were introduced by Burpee—famous the world over for Sweet Peas. Year in and year out we work to improve existing varieties and to create new ones. Among the Early Flowering ones recently introduced by us, and which are most outstanding, are those named in honor of, and with the permission of, such famous women as Pearl Buck, Osa Johnson, Ann Batchelder, Helen Hayes and Kate Smith.

Burpee's Perennial Flower Seeds

Perennial Flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the lovely, dainty Rainbow Rock Cress (*Aubretia*), Golden Alyssum, Siberian Wallflower, Columbine, and many others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. The Burpee leaflet, "Perennials from Seed," will be sent **free** upon request.

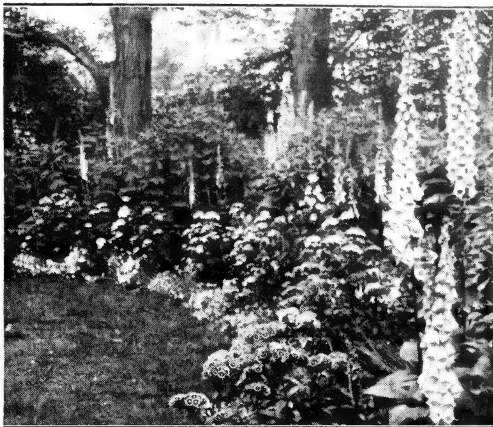

With the perennials, we have included the best of the biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

Average heights and blooming season are given in the description for each class. Some variation is natural in different localities.

Hardy Amaryllis

8900 Hallii (*Lycoris squamigera*) Sometimes called the *Magic Flower*, for after the foliage is produced it dies off and a flowering stalk appears, as if by magic, in August, topped with a cluster of showy, lily-like, lilac-pink flowers. (See picture above.) When the plant is in foliage, we suggest that you place a marker near it so that the bulb, while dormant, may not be injured by cultivation. The supply of bulbs is limited, so we urge you to order this rare amaryllis now. Hardy without protection.

Burpee's Dahlia Roots

Jersey's Beauty

Each year on our Fordhook Farms we try out hundreds of varieties of dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we ourselves have created. Whether you select the massive Decorative, the lovely Cactus, or the small Pompon varieties, you will be delighted with the results. We supply **strong root divisions** from field-grown clumps.

The American Dahlia Society has adopted a classification for all dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs. Thus:

F. D. = Formal Decorative; **I. D.** = Informal Decorative;
C. = Cactus; **S. C.** = Semi-Cactus.

Easy to use; simply squeeze pump handles together and you get just the spray you want, wherever you want it. Complete, \$1.95.

Hole-in-One Plant Setter and Bulb Planter

250X80 This handy tool makes a hole in one operation. Merely cut the tool into the soil, remove it with a slight twisting motion and the soil comes with it, leaving a clean hole in which plants or bulbs may be set. 60c each.

250X93 Train-etts

NEW WEATHERIZED TRELLIS NETTING

Grow finer, larger Sweet Peas, Garden Peas, Pole Beans, Cucumbers, Tomatoes, etc. Use instead of wire or string. Wire gets hot in sun and burns delicate tendrils, retarding growth. String is tedious to tie, often rotten, causing plants to fall to ground. TRAIN-ETTS do no harm to plants for several seasons. Can be hung—without fuss or bother—in 5 minutes. In 3 sizes—(A) 60 x 72 in., 40c; (B) 60 x 96 in., 50c; (C) 60 x 180 in., 70c.
